Descrizione del sistema

Descripción del sistema

1.1

System description

The W20 hot rolled steel window and door system was developed to provide architects and planners with optimal solutions for projects involving the renovation or restoration of industrial heritage buildings. In addition, this profile series provides interesting stimulation for design-oriented contemporary architecture. The characteristic profile contour – 5.5 mm recess in the sightline – emphasises both the delicate appearance and the link to historical hot-rolled steel profiles. Furthermore, these unique profile contours ensure that the glazing is always flush, in the same line between the fixed sash and the window sash.

The wide range of profiles – with installation depths of 32 mm and 37 mm and sightline widths of 22 mm for the frame profile and 55 mm "Classic", 43 mm "Slim" e 50 mm "Basic" for the frame/sash combination – makes it possible to create large-format windows, doors and window fronts with any type of opening. The opening and design variants are typical of Bauhaus architecture but are also in line with contemporary style and aesthetics. In addition to the accessories that have been specially developed and selected by OTTOSTUMM | Mogs, the W20 system is also compatible with a wide range of other fittings. This makes it possible to replace steel windows from many different historical periods and styles while staying true to the originals.

Descrizione del sistema

Il sistema per finestre e porte in acciaio laminato W20 è stato sviluppato per offrire ad architetti e progettisti soluzioni ottimali per la ristrutturazione o il restauro di edifici industriali e storici. Inoltre, questa serie di profili offre spunti interessanti per un'architettura contemporanea incentrata sul design moderno. Il design caratteristico del profilo, con giochi di sormonta delle superfici visibili, ne sottolinea la profondità ridotta esprime lo stile degli storici profili d'acciaio laminati a caldo. I profili sono studiati per ottenere sempre la complanarità tra vetrature fisse e vetrature dei battenti.

Grazie alla vasta gamma di profili con profondità comprese tra 32 mm e 37 mm e larghezze visibili tra i 22 mm del profilo del telaio ai 55 mm "Classic", 43 mm "Slim" e 50 mm "Basic" della combinazione telaio-battente, è possibile realizzare finestre di grande dimensione, porte e facciate finestrate con tutti i tipi di apertura desiderati. Varianti di apertura e tipologie tipiche spaziano dell'architettura Bauhaus allo stile ed estetica moderni.

Il sistema W20 è compatibile, oltre che con gli accessori appositamente sviluppati e selezionati da OTTOSTUMM | Mogs, con una vasta gamma di ferramenta reperibile in commercio. Ciò consente di sostituire in modo fedele all'originale finestre d'acciaio delle epoche e degli stili più diversi.

Descripción del sistema

El sistema de ventanas y puertas de acero laminado en caliente W20 se ha desarrollado para ofrecer a arquitectos y proyectistas soluciones óptimas para aquellos proyectos de renovación o restauración de edificios históricos del legado industrial. Además, esta serie de perfiles ofrece un interesante impulso para arquitectos contemporáneos interesados en el diseño. El contorno característico del perfil - retranqueo de 5.5 mm en la línea visible - realza la ornamentación y el vínculo con los perfiles de acero laminados en caliente con carácter histórico. Además, estos contornos únicos de perfiles siempre ofrecen una línea recta contigua entre los acristalamientos de la hoja fija y la hoja de la ventana.

Gracias a la amplia gama de perfiles con profundidades de 32 mm y 37 mm, con anchos de 22 mm para el perfil del marco y 55 mm "Classic", 43 mm "Slim" y 50 mm "Basic" para la combinación marco/hojas, es posible elaborar ventanas, puertas y ventanales de gran tamaño con todos los tipos de aperturas deseadas. Las variantes de aperturas y acabados son típicas de la arquitectura Bauhaus, pero también armonizan perfectamente con el estilo y la estética contemporánea.

El sistema W20 es compatible tanto con los accesorios seleccionados y desarrollados especialmente por OTTOSTUMM | Mogs como con una gran variedad de herrajes independientes. Esto permite sustituir ventanas de acero de diferentes épocas históricas y corrientes estéticas conservando la fidelidad al original.

System description

Fixed glazing, single- and double-leaf windows, side hung and bottom-hung windows opening inwards and outwards, top-hung projecting windows, opening inwards and outwards;

Wet and dry glazing;

Glass thickness from 4 to 20 mm;

$U_w = 2.58 \text{ [W/m}^2\text{K]}$
calculated on sample standardized
window frame dimension
1230x1480 mm according to the
UNI-EN 14351-1
with $U_g = 1.3 \text{ [W/m}^2\text{K]}$
and $\text{PSI} = 0.036 \text{ [W/mK]}$;

System fittings with screw-on and
weld-on hinges.

Descrizione del sistema

Vetratura fissa, finestre a una,
due o più battenti, a vasistas e a
spongere, con apertura interna o
esterna, porte-finestre a una, due o
più battenti con apertura interna o
esterna;

Vetrocamera sigillato con silicone o
con guarnizioni a secco;

Spessore del vetrocamera
da 4 a 20 mm;

$U_w = 2.58 \text{ [W/m}^2\text{K]}$ calcolato su un
campione standard di dimensioni
1230x1480 mm secondo
UNI-EN 14351-1
con $U_g = 1.3 \text{ [W/m}^2\text{K]}$
e $\text{PSI} = 0.036 \text{ [W/mK]}$;

Ferramenta con cerniere ad avvitare
o a saldare.

Descripción del sistema

Acrystalamiento fijo, ventanas
oscilobatientes de una o dos hojas
que se abren hacia dentro o hacia
fuera, puertas/ventanas proyectantes
que se abren hacia dentro o hacia
fuera;

Acrystalamiento en seco y húmedo;

Grosor del cristal de 4 a 20 mm;

$U_w = 2.58 \text{ [W/m}^2\text{K]}$ calculado sobre
una muestra de marco de ventana
normalizado de dimensiones
1230x1480 mm según
UNI-EN 14351-1
con $U_g = 1.3 \text{ [W/m}^2\text{K]}$
y $\text{PSI} = 0.036 \text{ [W/mK]}$;

Herrajes del sistema con bisagras de
soldadura o atornillables.

FF 3203LF-01 / FF 3203LF-01	Basic	7.1

The table lists five window profiles with their Uf values and cross-section diagrams. The profiles are:
 1. FF 3203TN-01: Uf = 8.6 (T = 20 mm). Cross-section shows a top rail height of 31.8 mm and a bottom rail height of 28.6 mm. Glazing thicknesses are 13 mm, 3.2 mm, and 13 mm.
 2. FF 2503TR-14: Uf = 8.5 (T = 10 mm). Cross-section shows a top rail height of 25.3 mm and a bottom rail height of 28.6 mm. Glazing thicknesses are 13 mm, 3 mm, and 13 mm.
 3. FF 3205LC-01 / FF 3203LF-01: Uf = 5.9. Cross-section shows a top rail height of 31.8 mm and a bottom rail height of 39.7 mm. Glazing thicknesses are 13 mm, 14.3 mm, and 13 mm.
 4. FF 3205LC-01 / FF 3203HF-01: Uf = 7.6. Cross-section shows a top rail height of 31.8 mm and a bottom rail height of 52.4 mm. Glazing thicknesses are 13 mm, 27 mm, and 13 mm.
 5. FF 3203LF-01 / FF 3203LF-01: Uf = 7.1. Cross-section shows a top rail height of 31.8 mm and a bottom rail height of 44.4 mm. Glazing thicknesses are 13 mm, 19 mm, and 13 mm.

Dimensions

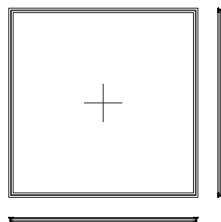

The dimensional limits must be checked on the basis of the total weight (frame and glass), the accessories used, the environmental conditions (exposure, wind pressure, ...). In case of internal partitions the dimensional limits can be extended. Contact our technical office for any clarification.

Dimensioni

I limiti dimensionali vanno comunque verificati in base al peso totale (telai e vetro), agli accessori utilizzati, alle condizioni ambientali (esposizione, spinta del vento, ...). In caso di particioni interne i limiti dimensionali possono essere ampliati. Contattare il nostro ufficio tecnico per ogni chiarimento.

Dimensiones

Sin embargo, los límites dimensionales deben verificarse en función del peso total (marco y vidrio), los accesorios utilizados, las condiciones ambientales (exposición, presión del viento, ...). En caso de particiones internas, los límites dimensionales pueden extenderse. Póngase en contacto con nuestra oficina técnica para cualquier aclaración.

Glazing table**Tabella vetrazioni****Tabla de acristalamiento**

2.3

Important notes:

This system requires the use of glasses with edge covered.

The glazing tables and sealing guidelines are based on the nominal sizes of the profiles and glazing. Due to the production tolerances (profiles, glazing beads, panes) we advise double checking your selection.

When using insulating glass in exterior applications, use a UV resistant edge seal with the minimum width.

Note importanti:

Per questo sistema è necessario l'utilizzo di vetri con canaline ribassate.

Le tabelle vetrazioni si riferiscono alle misure nominali dei profili e delle vetrature. A causa delle tolleranze di produzione (profili, profili fermavetro, spessori) è preferibile effettuare una seconda verifica della selezione.

Quando si utilizza vetro isolante in applicazioni esterne, utilizzare un sigillante per superfici resistente ai raggi UV con la larghezza minima.

Notas importantes:

Este sistema requiere el uso de gafas con canales rebajados.

Las tablas de acristalamiento hacen referencia a las medidas nominales de los perfiles y los acristalamientos. Debido a las tolerancias de fabricación (perfiles, junquillos y espesores de vidrio), debe comprobarse la gama en caso necesario.

Cuando use vidrio aislante en aplicaciones exteriores, use un sellador de superficie resistente a los rayos UV con el ancho mínimo.

Note:

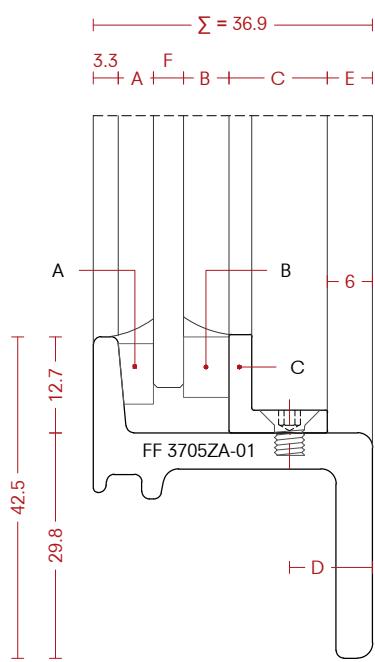

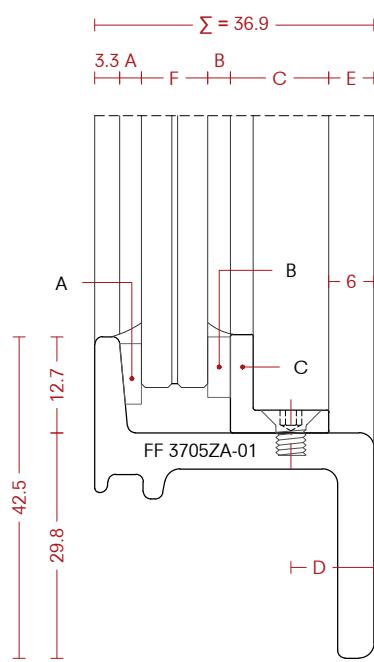

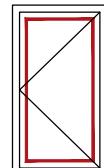

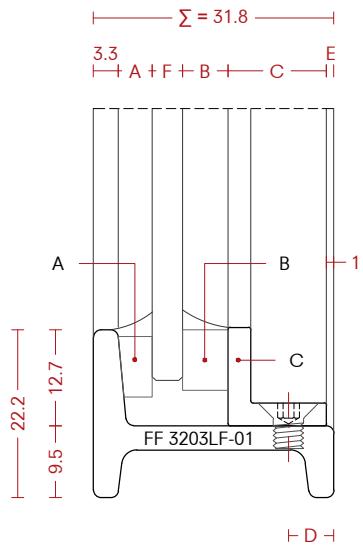

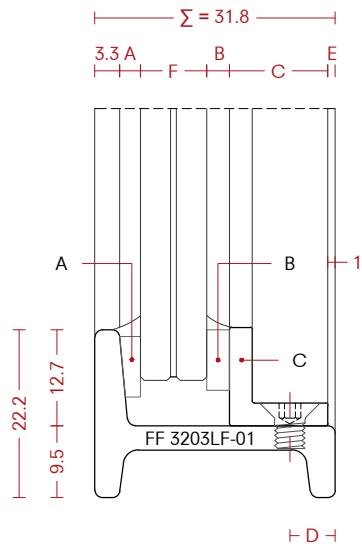

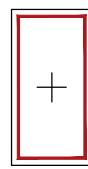

We recommend to reduce the height of the spacer of the Insulated Glass Unit (IGU).

Nota:

Si consiglia di adottare canaline vetrocamera con altezza ridotta.

Nota:

Recomendamos reducir la altura del espaciador de la unidad de vidrio aislante.

Opening scheme

A window or a door is defined as "left opening" or "right opening" when, viewed from the opening side, the hinges are respectively on the left or on the right.

Schema di apertura

Una finestra o una porta si definiscono "apertura sinistra" o "apertura destra" quando, vista dalla parte del verso di apertura, le cerniere si trovano rispettivamente a sinistra o a destra.

Diagramma de apertura

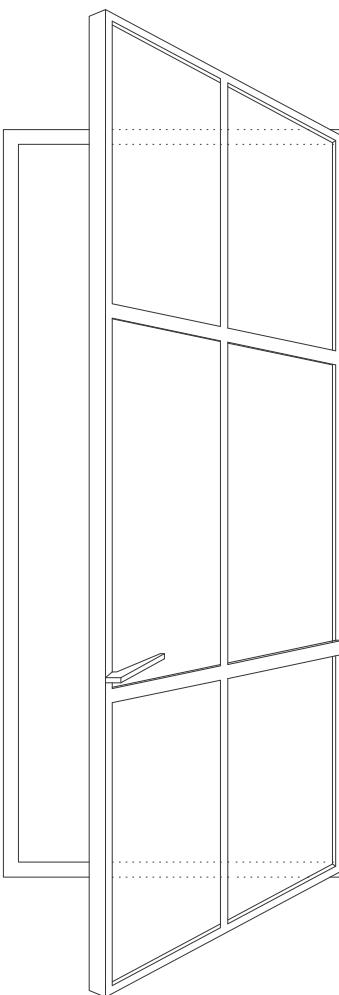

Una ventana o puerta se llama "apertura izquierda" o "apertura derecha" cuando, en la dirección de apertura, las bisagras están respectivamente a la izquierda o a la derecha.

3.3

Important notes:

All weld-on and/or screw-on hinges are compatible for both open-in and open-out.

Note importanti:

Tutte le cerniere a saldare e/o avvitare sono compatibili sia per apertura interna che per apertura esterna.

Notas importantes:

Todas las bisagras de soldadura y/o atornillable son compatibles tanto para abrir hacia adentro como para abrir hacia afuera.

Weld-on hinge

Bright steel, Ø10 mm, length 60 mm, with fixed pin and brass intermediate washer.

Capacity: 38 kg (pair=2 pc)

PU = 1 piece

Cerniera a saldare

Acciaio decapato, Ø10 mm, lunghezza 60 mm, con perno fisso e rondella intermedia in ottone.

Portata: 38 kg (coppia=2 pezzi)

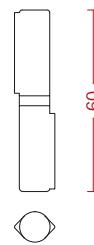

UV = 1 pezzo

Bisagra de soldadura

Acerro bruto, diámetro de Ø10 mm, longitud de 60 mm, con perno fijo y anillo intermedio de latón.

Capacidad de carga: 38 kg (par=2 unidades)

CANTIDAD = 1 unidad

C99000-12

Weld-on hinge

Bright steel, Ø12 mm, length 80 mm, with fixed pin and brass intermediate washer.

Capacity: 50 kg (pair=2 pc)

PU = 1 piece

Cerniera a saldare

Acciaio decapato, Ø12 mm, lunghezza 80 mm, con perno fisso e rondella intermedia in ottone.

Portata: 50 kg (coppia=2 pezzi)

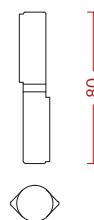

UV = 1 pezzo

Bisagra de soldadura

Acerro bruto, diámetro de Ø12 mm, longitud de 80 mm, con perno fijo y anillo intermedio de latón.

Capacidad de carga: 50 kg (par=2 unidades)

CANTIDAD = 1 unidad

C99001-12

Weld-on hinge

Bright steel, Ø14 mm, length 100 mm, with fixed pin and brass intermediate washer.

Capacity: 80 kg (pair=2 pc)

PU = 1 piece

Cerniera a saldare

Acciaio decapato, Ø14 mm, lunghezza 100 mm, con perno fisso e rondella intermedia in ottone.

Portata: 80 kg (coppia=2 pezzi)

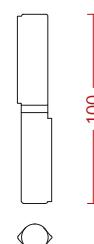

UV = 1 pezzo

Bisagra de soldadura

Acerro bruto, diámetro de Ø14 mm, longitud de 100 mm, con perno fijo y anillo intermedio de latón.

Capacidad de carga: 80 kg (par=2 unidades)

CANTIDAD = 1 unidad

C99002-12

Weld-on hinge

Bright steel, Ø16 mm, length 120 mm, with fixed pin and brass intermediate washer.

Capacity: 100 kg (pair=2 pc)

PU = 1 piece

Cerniera a saldare

Acciaio decapato, Ø16 mm, lunghezza 120 mm, con perno fisso e rondella intermedia in ottone.

Portata: 100 kg (coppia=2 pezzi)

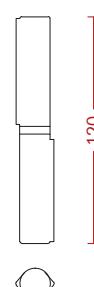

UV = 1 pezzo

Bisagra de soldadura

Acerro bruto, diámetro de Ø16 mm, longitud de 120 mm, con perno fijo y anillo intermedio de latón.

Capacidad de carga: 100 kg (par=2 unidades)

CANTIDAD = 1 unidad

C99003-12

Weld-on hinge

Bright steel, Ø16 mm, length 140 mm, with fixed pin and brass intermediate washer.

Capacity: 140 kg (pair=2 pc)

PU = 1 piece

Cerniera a saldare

Acciaio decapato, Ø16 mm, lunghezza 140 mm, con perno fisso e rondella intermedia in ottone.

Portata: 140 kg (coppia=2 pezzi)

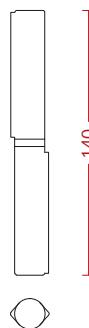

UV = 1 pezzo

Bisagra de soldadura

Acerro bruto, diámetro de Ø16 mm, longitud de 140 mm, con perno fijo y anillo intermedio de latón.

Capacidad de carga: 140 kg (par=2 unidades)

CANTIDAD = 1 unidad

C99004-12

Weld-on hinge

Galvanized steel, Ø12 mm, length 80 mm, with galvanized pin and intermediate washer with "loose" pin.

Capacity: 100 kg (pair=2 pc)

-02 = Galvanized steel

PU = 1 piece

Cerniera a saldare

Acciaio zincato, Ø12 mm, lunghezza 80 mm, con perno zincato sfilabile e rondella intermedia.

Portata: 100 kg (coppia=2 pezzi)

-02 = Acciaio zincato

UV = 1 pezzo

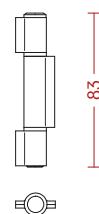

Bisagra de soldadura

Acerro galvanizado, diámetro de Ø12 mm, longitud de 80 mm, con perno galvanizado y anillo intermedio con pasador "suelto".

Capacidad de carga: 100 kg (par=2 unidades)

-02 = Acero galvanizado

CANTIDAD = 1 unidad

C99006-02

3D Weld-on hinge

3-dimensional adjustable hinge for windows and doors.
Length 122 mm, Ø16 mm, with low-maintenance bushes made of brass, eccentric spindle and screw plug made from stainless steel AISI 304

Adjustability:

Height ±2 mm;

Lateral contact pressure ±1 mm

Capacity: 160 kg (pair=2 pc)

-12 = Bright steel

PU = 1 piece

Cerniera a saldare regolabile 3D

Cerniera regolabile su tre dimensioni, per finestre o porte. Lunghezza 122 mm, Ø16 mm, con boccole in ottone, perno eccentrico e vite di chiusura in acciaio inox AISI 304

Regolazione:

Altezza ±2 mm;

Laterale ±1 mm

Portata: 160 kg (coppia=2 pezzi)

-12 = Acciaio decapato

UV = 1 pezzo

Bisagra de soldadura en 3D

Bisagra ajustable en 3 dimensiones para ventanas y puertas. Longitud de 122 mm, diámetro de Ø16 mm, con cojinete de deslizamiento de escaso mantenimiento de bronce arquitectónico, perno excéntrico y tornillo de cierre de acero inoxidable AISI 304

Ajustabilidad:

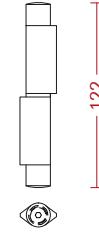

Altura ±2 mm;

Laterales ±1 mm

Capacidad de carga: 160 kg (par=2 unidades)

-12 = Acerro bruto

CANTIDAD = 1 unidad

C99008-12

End caps for hinges

For Ø16 mm 3D weld-on hinge.

-12 = Bright steel

PU = 1 piece

Tappi di chiusura per cerniere

Per cerniera a saldare regolabile 3D Ø16 mm

-12 = Acciaio decapato

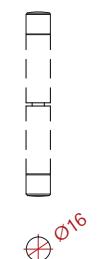

UV = 1 pezzo

Tapas para bisagras

Para bisagra de soldadura en 3 dimensiones Ø16 mm

-12 = Acerro bruto

CANTIDAD = 1 unidad

Q99966-12

Screw-on hinge

Two-part screw-on hinge brass Ø22 mm, length 80 mm

R = Right opening
L = Left opening

Capacity: 80 kg (pair=2 pc)

PU = 1 piece

Cerniera ad avvitare

Cerniera ad avvitare in ottone Ø22 mm, lunghezza: 80 mm

R = Apertura destra
L = Apertura sinistra

Portata: 80 kg (coppia=2 pezzi)

UV = 1 pezzo

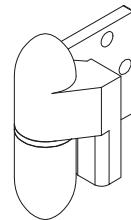

Bisagra atornillable

Bisagra atornillable de 2 piezas latón Ø22 mm, longitud de 80 mm

R = Apertura derecha
L = Apertura izquierda

Capacidad de carga: 80 kg (par=2 unidades)

CANTIDAD = 1 unidad

C99106-25 R
C99105-25 L

Screw-on hinge

Two-part screw-on hinge brass Ø12.5 mm, length 85 mm

Capacity: 80 kg (pair=2 pc)

PU = 1 piece

Cerniera ad avvitare

Cerniera ad avvitare in ottone Ø12.5 mm, lunghezza: 85 mm

Portata: 80 kg (coppia=2 pezzi)

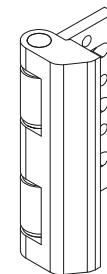

UV = 1 pezzo

Bisagra atornillable

Bisagra atornillable de 2 piezas latón Ø12.5 mm, longitud de 85 mm

Capacidad de carga: 80 kg (par=2 unidades)

CANTIDAD = 1 unidad

C99107-25

Screw-on hinge

Two-part screw-on hinge brass Ø12.5 mm, length 50 mm

Capacity: 50 kg (pair=2 pc)

PU = 1 piece

Cerniera ad avvitare

Cerniera ad avvitare in ottone Ø12.5 mm, lunghezza: 50 mm

Portata: 50 kg (coppia=2 pezzi)

Health and safety

Prevenzione e sicurezza

Prevención y seguridad

5.1

Health and safety

W20 hot rolled steel profiles can generally be processed in the same way as other steel window profile systems. No special machines or process for fabrication are required. The standard fabrication processes, such as welding and grinding, can be carried out easily. During welding and machining we recommend to protect eyes and airways according to country specific health and safety regulations.

Prevenzione e sicurezza

I profili W20 in acciaio laminato a caldo possono generalmente essere lavorati analogamente ad altri sistemi di profili per finestre in acciaio. Non sono necessarie macchine speciali o processi particolari per la fabbricazione. I processi di fabbricazione standard, come saldatura e rettifica, possono essere eseguiti facilmente. Durante le lavorazioni e la saldatura raccomandiamo di proteggere gli occhi e le vie respiratorie secondo le norme specifiche di salute e sicurezza del Paese.

Salud y seguridad

Los Perfiles W20 en acero laminado en caliente generalmente se pueden procesar de la misma manera que otros sistemas de perfiles de ventana de acero. No se requieren máquinas especiales o medidas para la fabricación. Los procesos de fabricación estándar, como la soldadura y el pulido, se pueden llevar a cabo fácilmente. Durante el procesamiento y la soldadura, recomendamos proteger los ojos y las vías respiratorias de acuerdo con las normas de salud y seguridad específicas del país.

Cutting

Taglio

Corte

5.2

Cutting

W20 profiles can be cut with conventional steel saws. The feed rate on saws have to be reduced compared to conventional tubular steel profiles. We recommend a proper lubrication during cutting operations.

For further information, see also the chapter "General Information".

Taglio

I profili W20 possono essere tagliati con seghes per acciaio convenzionali. La velocità di avanzamento delle seghes deve essere ridotta rispetto a quella comunemente usata per i convenzionali profili tubolari in acciaio. Raccomandiamo una lubrificazione adeguata durante le operazioni di taglio.

Per ulteriori indicazioni, vedere anche il Capitolo "informazioni generali".

Cutting

Los perfiles W20 se pueden cortar con sierras para metales convencionales. Dado que los perfiles presentan muchas filigranas, la velocidad de avance al serrar debe reducirse en comparación con los perfiles tubulares de acero convencionales. Recomendamos utilizar una lubricación de micropulverización para cortar los perfiles.

Para más información, véase también el capítulo "Información general".

Welding

W20 profiles can be welded without taking any particular precautions, using the standard CMT or MIG/MAG welding procedure. We recommend using a smoke extraction system and ensuring sufficient ventilation of the room. Ensure the welding is thorough and clean.

Saldatura

I profili W20 possono essere saldati senza particolari precauzioni, utilizzando la procedura di saldatura standard CMT o MIG/MAG. Raccomandiamo di utilizzare un sistema di aspirazione fumi e di garantire una ventilazione sufficiente della stanza. Assicurarsi che la saldatura sia accurata e pulita.

Soldadura

Los perfiles W20 pueden procesarse con los procedimientos de soldadura habituales, como MIG/MAG o CMT, sin ningún tipo de medida especial. Durante la soldadura, recomendamos utilizar un extractor de humos y garantizar la ventilación adecuada de la sala. Garantizar una soldadura concienzuda y limpia.

Frame welding

1. Deburr and bevel bar ends.
2. Assemble the frame on the welding table.
3. Check frame dimensions.
4. Check angularity.
5. Check diagonal dimensions.
6. Fix position with small welding spots.
7. Recheck diagonal dimensions.
8. Carry out the welding alternating from the inside to the outside.
9. Recheck diagonal dimensions.
10. Grind the corners, creating a flat and smooth surface.

Saldatura del telaio

1. Sbavare e smussare l'estremità della barra.
2. Saldare il telaio su di un tavolo di saldatura.
3. Controllare le dimensioni del telaio.
4. Controllare gli angoli.
5. Controllare le dimensioni delle diagonali.
6. Fissare la posizione con piccoli punti di saldatura.
7. Ricontrollare le dimensioni delle diagonali.
8. Eseguire la saldatura procedendo dall'interno verso l'esterno dell'angolo.
9. Ricontrollare le dimensioni delle diagonali.
10. Rettificare dei cordoni di saldatura, creando una superficie piana e liscia.

Soldadura del marco

1. Desbarbar y biselar los extremos de las barras.
2. Montar el marco sobre la mesa de soldadura.
3. Comprobar las dimensiones del marco.
4. Comprobar los ángulos.
5. Comprobar las diagonales.
6. Fijar la posición del marco con pequeños puntos de soldadura.
7. Volver a comprobar las diagonales.
8. Ejecutar la soldadura desde el lado interior al lado exterior, alternándolos.
9. Volver a comprobar las diagonales.
10. Rectificar en plano las costuras de soldadura en las esquinas.

Welding profiles made

The best results were achieved using the following two welding procedures:

MAG (metal-arc active gas)

Inert gas: CAR 18 (18% CO₂ and 82% Argon sec. EN 439 M21)
Welding rod: DT-Ziro, Ø0.8 mm (Dratec)

Preparation of profile cut:

Bevel bar ends (ca. 2 mm x 45°).
Do not bevel the last 5 mm of the outermost point in order to avoid burning away the sharp edge. Spot-weld the inner and outer corners, then draw a weld seam from the inside outward.

CMT (cold metal transfer)

Type of gas: 100% Argon
Welding rod:
A) CuSi₃, Ø0.8 mm (Dratec/Bedra)
B) DT-Ziro, Ø0.8 mm (Dratec)

Preparation of profile cut:

Bevel bar ends (ca. 2 mm x 45°).
Do not bevel the last 5 mm of the outermost point in order to avoid burning away the sharp edge. Spot-weld the inner and outer corners, then draw a weld seam from the inside outward.
The CMT welding procedure is well suited to welding steel profiles. One advantage of the CuSi₃ welding rod is that weld seams can be ground flat in a significantly shorter amount of time. This kind of rod also proves especially advantageous when dealing with stepped flanges. The mechanical resistance of CuSi₃ filling material is lower than that of DT-Ziro, which means that it should not be used with very large casement windows or doors. Smaller and medium size window leaves can be welded with CuSi₃. However, steel hinges should be welded only with DT-Ziro filling material.

Saldatura di profili in acciaio

I migliori risultati di saldatura si raggiungono con i seguenti due metodi:

MAG (metal-arc active gas)

Tipo di gas: miscela CAR 18 (18% CO₂ e 82% Argon sec. EN 439 M21)
Materiale di riempimento: DT-Ziro, Ø0.8 mm (es. Dratec)

Preparazione dell'angolo: creare uno smusso di ca. 2 mm x 45° su entrambe le facce esterne del profilo. Non smussare gli ultimi 5 mm della punta esterna per mantenere inalterata la forma dello spigolo. Fissare l'angolo con un punto di saldatura sui due lati del bordo, quindi eseguire la saldatura.

CMT (cold metal transfer)

Tipo di gas: 100% Argon
Materiale di riempimento:
A) CuSi₃, Ø0.8 mm (Dratec/Bedra)
B) DT-Ziro, Ø0.8 mm (Dratec)

Preparazione dell'angolo: creare uno smusso di ca. 2 mm x 45° su entrambe le facce esterne del profilo. Non smussare gli ultimi 5 mm della punta esterna per mantenere inalterata la forma dello spigolo. Fissare l'angolo con un punto di saldatura sui due lati del bordo, quindi eseguire la saldatura. La saldatura CMT è particolarmente adatta per la saldatura di profili in acciaio. Il filo CuSi₃ ha il vantaggio di poter rettificare le saldature in pochissimo tempo. La resistenza meccanica del riempitivo CuSi₃ è inferiore a quella del filler DT-Ziro, quindi non dovrebbe essere utilizzato su porte molto grandi. Per tale motivo, questo tipo di saldatura può tranquillamente essere utilizzato su porte e finestre di dimensioni piccole e medie. Inoltre, le cerniere devono essere sempre saldate solo con riempimento DT-Ziro.

Soldadura de perfiles en acero

Con los dos siguientes procedimientos de soldadura se consiguen los mejores resultados:

MAG (metal-arc active gas)

Gas de protección: CAR 18 (18% de CO₂ y 82% de argón, de acuerdo con EN 439 M21)
Cordón de soldadura: DT-ZIRO, diámetro de 0.8 mm (Dratec)

Preparación de los cortes del perfil:
Biselar los extremos de las barras (aprox. 2 mm x 45°). No biselar los últimos 5 mm del extremo exterior para evitar la abrasión del borde afilado. Puntear las esquinas interiores y exteriores; luego, tirar de la costura de soldadura desde dentro hacia fuera.

CMT (cold metal transfer)

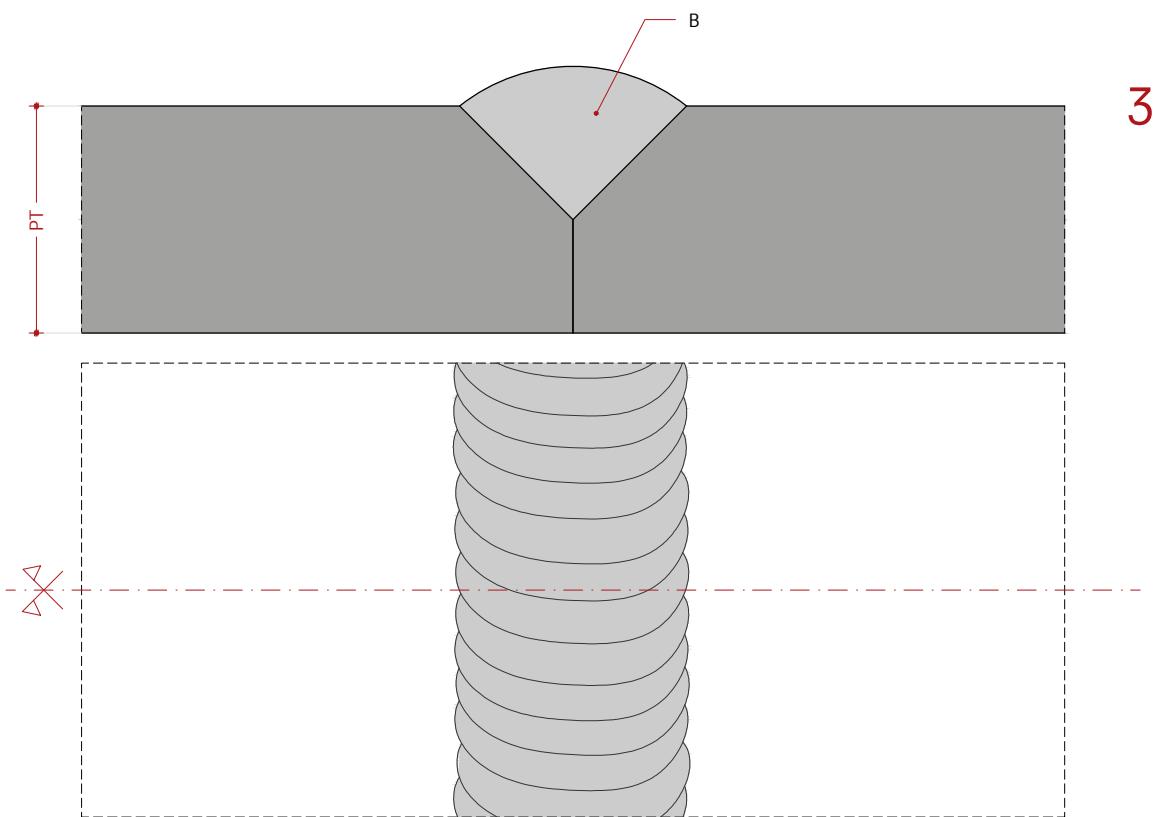

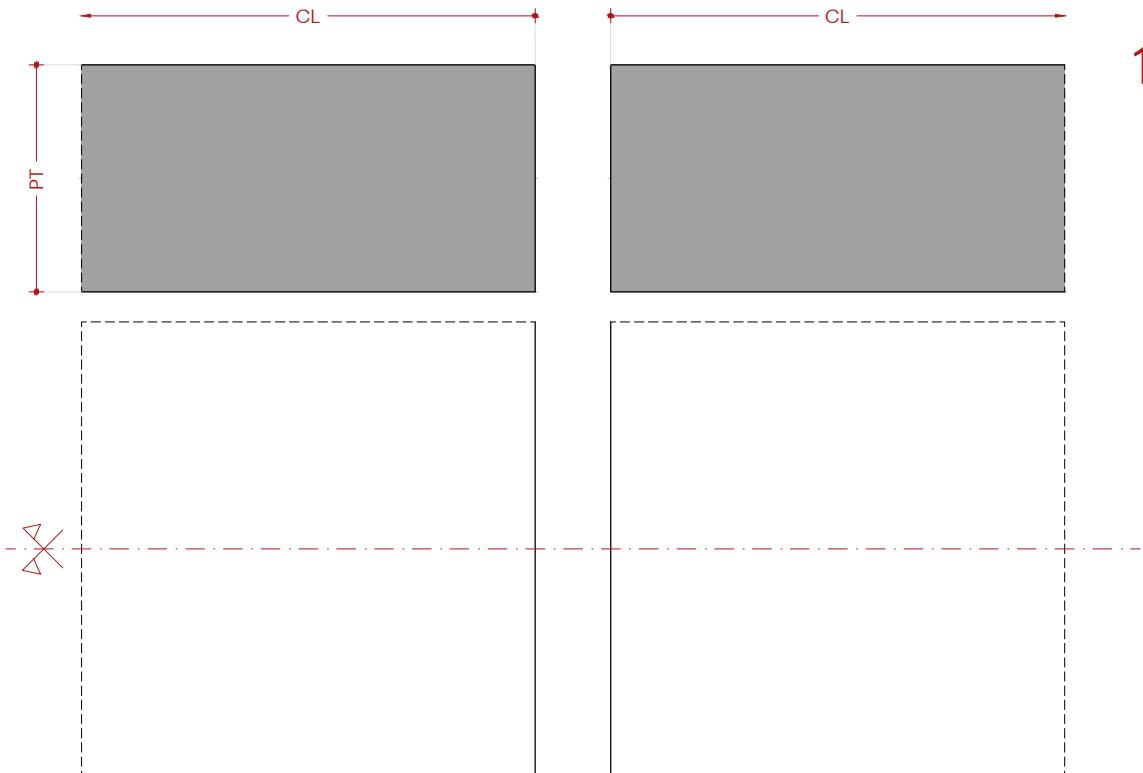

Gas de protección: 100% argón
Cordón de soldadura:
A) CuSi₃, diámetro 0.8 mm (Dratec/Bedra)
B) DT-ZIRO, diámetro de 0.8 mm (Dratec)

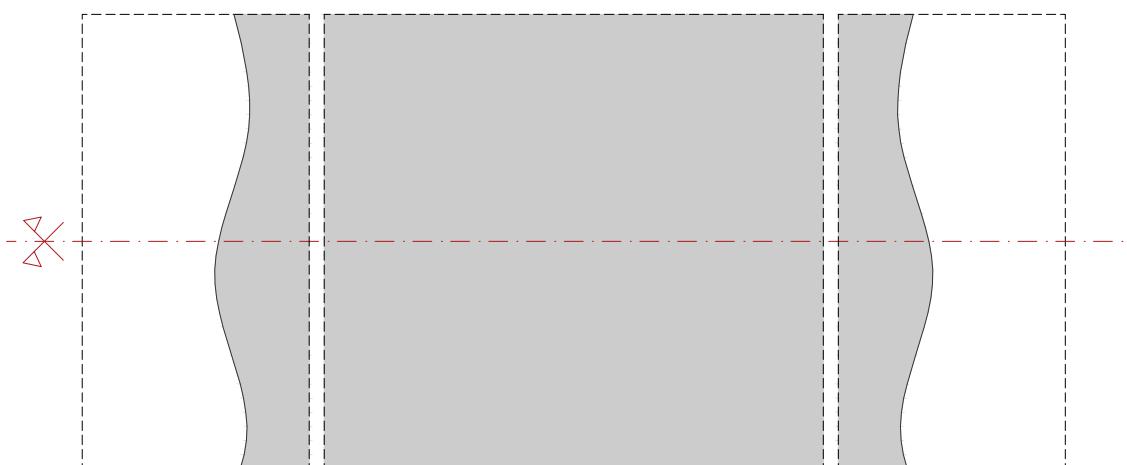

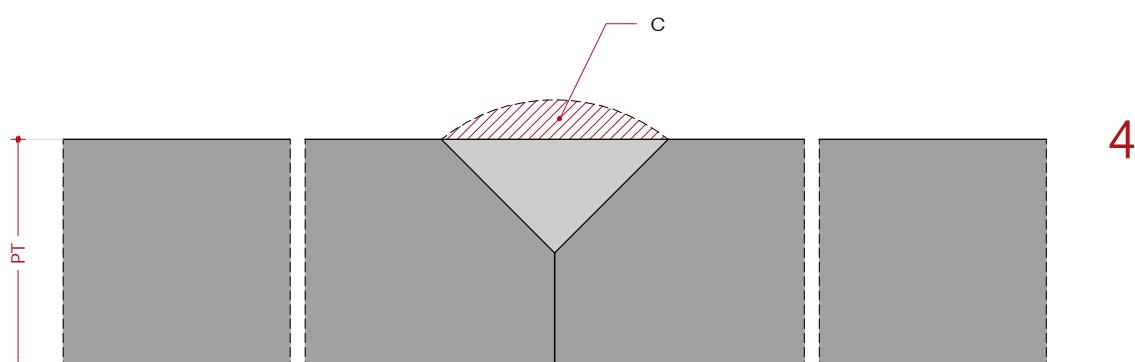

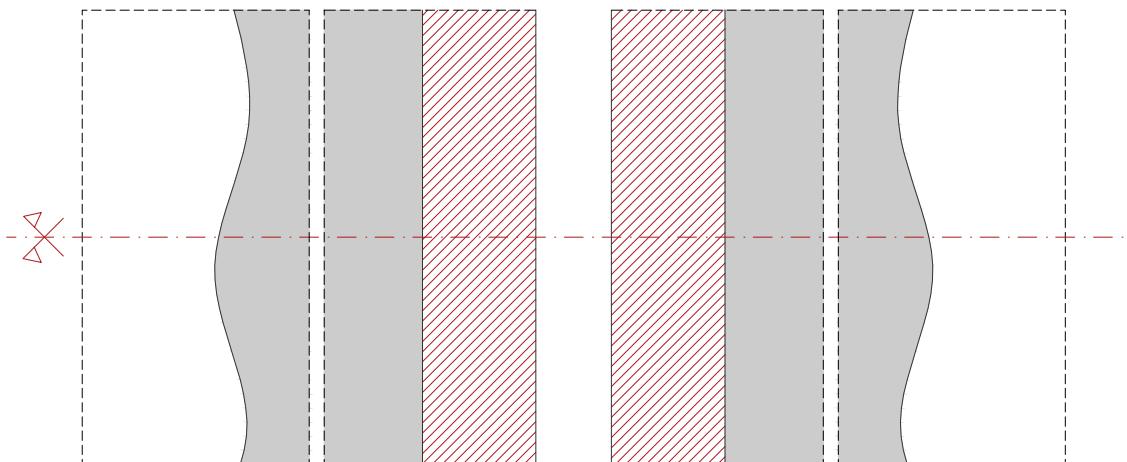

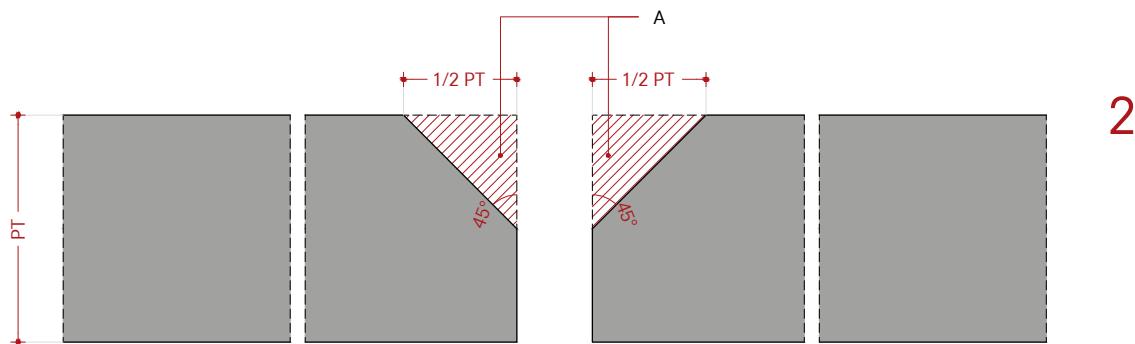

Preparación de los cortes del perfil:
Biselar los extremos de las barras (aprox. 2 mm x 45°). No biselar los últimos 5 mm del extremo exterior para evitar la abrasión del borde afilado. Puntear las esquinas interiores y exteriores; luego, tirar de la costura de soldadura desde dentro hacia fuera. El procedimiento de soldadura CMT es muy apropiado para soldar perfiles de acero. Una ventaja del cordón de soldadura CuSi₃ es que permite realizar el rectificado plano de las costuras de soldadura en un periodo de tiempo considerablemente reducido. Este cordón más blando resulta particularmente útil y beneficioso para las bridas escalonadas. En comparación con el material de relleno DT-Ziro, el agarre mecánico del material de relleno CuSi₃ es menor, por lo que no debe utilizarse para ventanas o puertas abatibles particularmente grandes. Las hojas de ventana más pequeñas y medianas se pueden soldar de forma segura con el cordón CuSi₃.

Weld-on hinges

Tabella portate
Cerniere a saldare

Tablas de peso
Bisagras de soldadura

	Material Materiale Material	Diameter Diametro Diámetro	Length Lunghezza Longitud	Capacity (pair) Portata (coppia) Capacidad (par)
C99000-12	Bright steel Acciaio decapato Acero bruto	$\varnothing = 10$ mm	60 mm	38 kg
C99001-12	Bright steel Acciaio decapato Acero bruto	$\varnothing = 12$ mm	80 mm	50 kg
C99002-12	Bright steel Acciaio decapato Acero bruto	$\varnothing = 14$ mm	100 mm	80 kg
C99003-12	Bright steel Acciaio decapato Acero bruto	$\varnothing = 16$ mm	120 mm	100 kg

Note

Please ensure that it is possible to unhinge the door leaf after installation.
This should be taken into account during the planning.

To weld the hinges we recommend the use 3 mm spacers to reach the 2.5 mm distance.

Nota

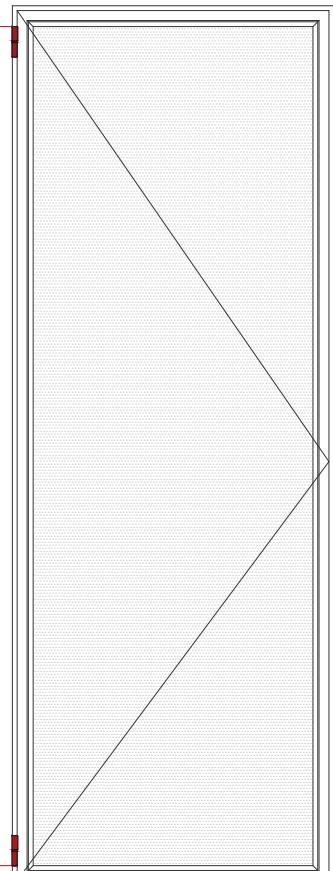

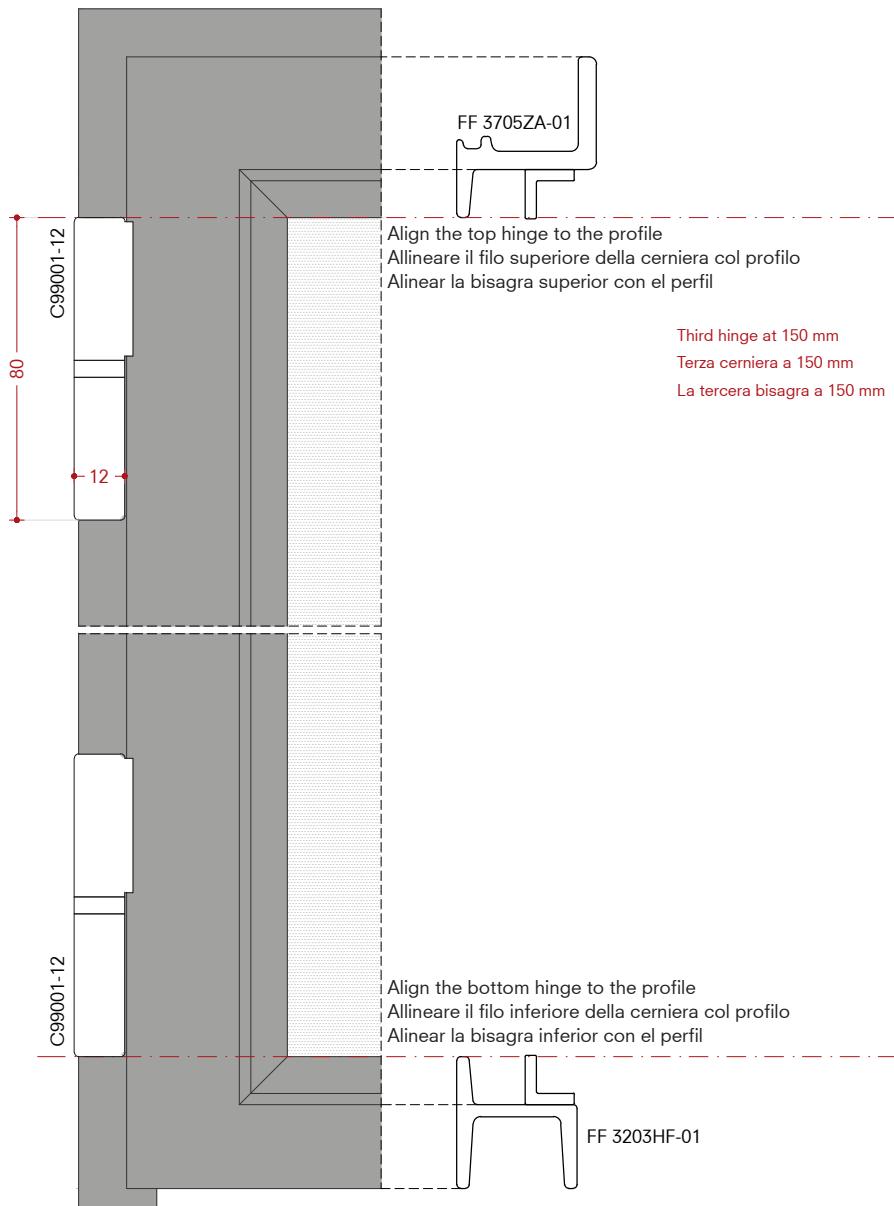

Assicurarsi che sia possibile smontare l'anta dopo l'installazione.
Da considerarsi sempre in fase di progettazione.

Per la saldatura delle cerniere consigliamo l'utilizzo di distanziatori da 3 mm per il successivo raggiungimento di 2.5 mm indicato.

Nota

Asegúrese de que sea posible desenganchar la puerta después de la instalación.
Esto debe tenerse en cuenta durante la planificación.

Para la soldadura de las bisagras recomendamos el uso de espaciadores de 3 mm para alcanzar los 2.5 mm indicados.

Installation

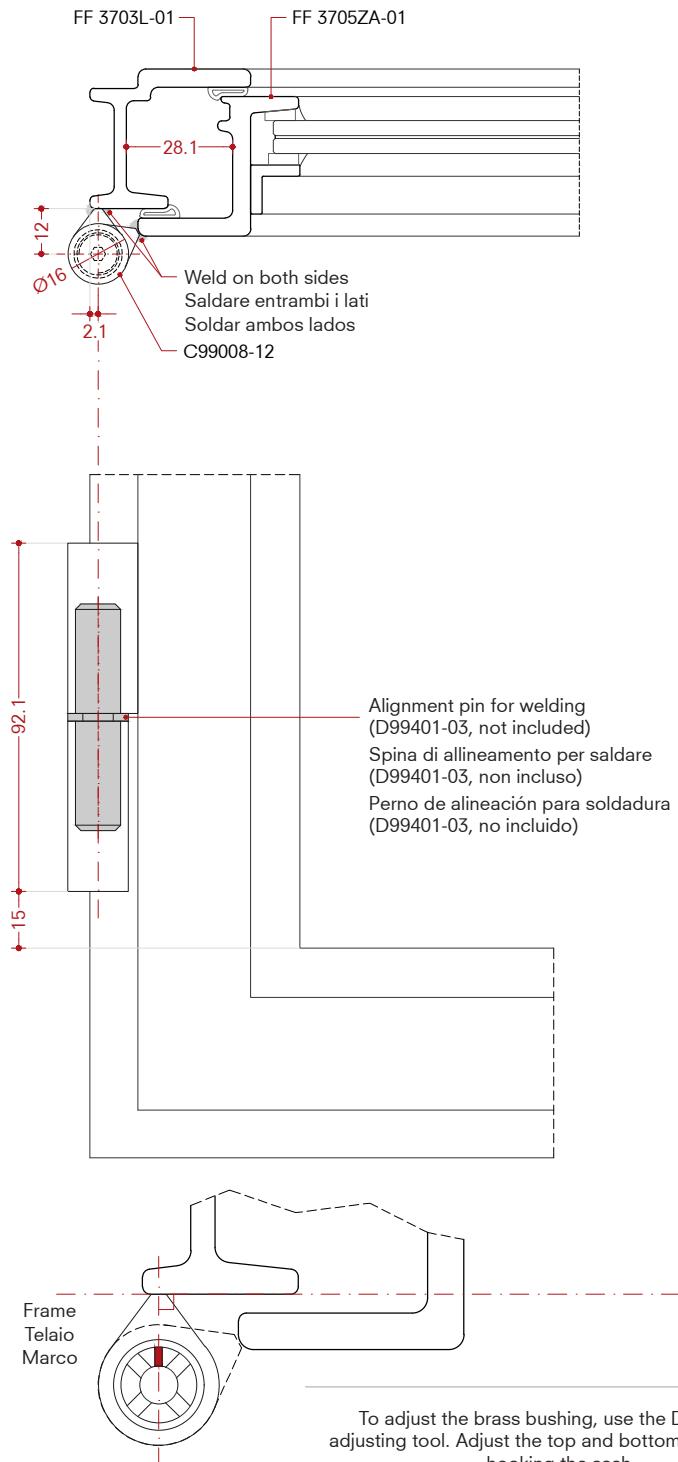

Adjustable 3D weld-on hinge
C99008-12

Montaggio

Cerniera 3D regolabile a saldare
C99008-12

Montaje

Bisagra ajustable 3D para soldar
C99008-12

To adjust the brass bushing, use the D99501-03 adjusting tool. Adjust the top and bottom hinge before hooking the sash.

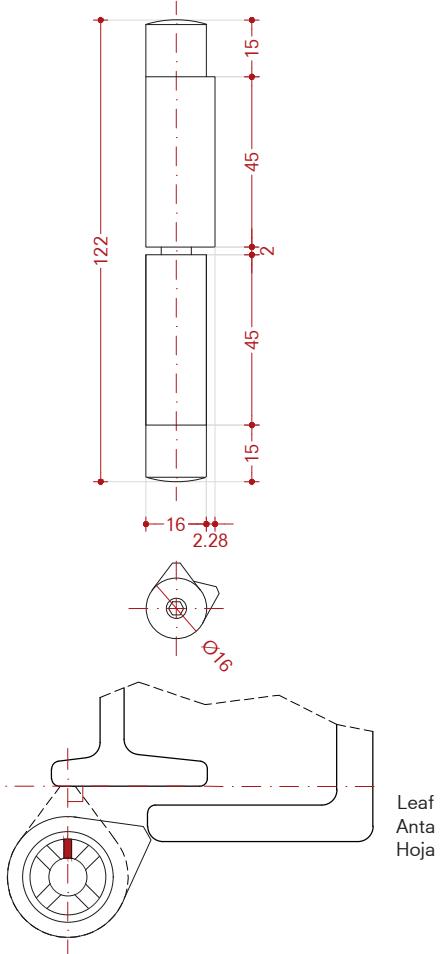

Per regolare la bussola in ottone utilizzare la chiave di regolazione D99501-03. Regolare la cerniera superiore e inferiore prima di agganciare il battente.

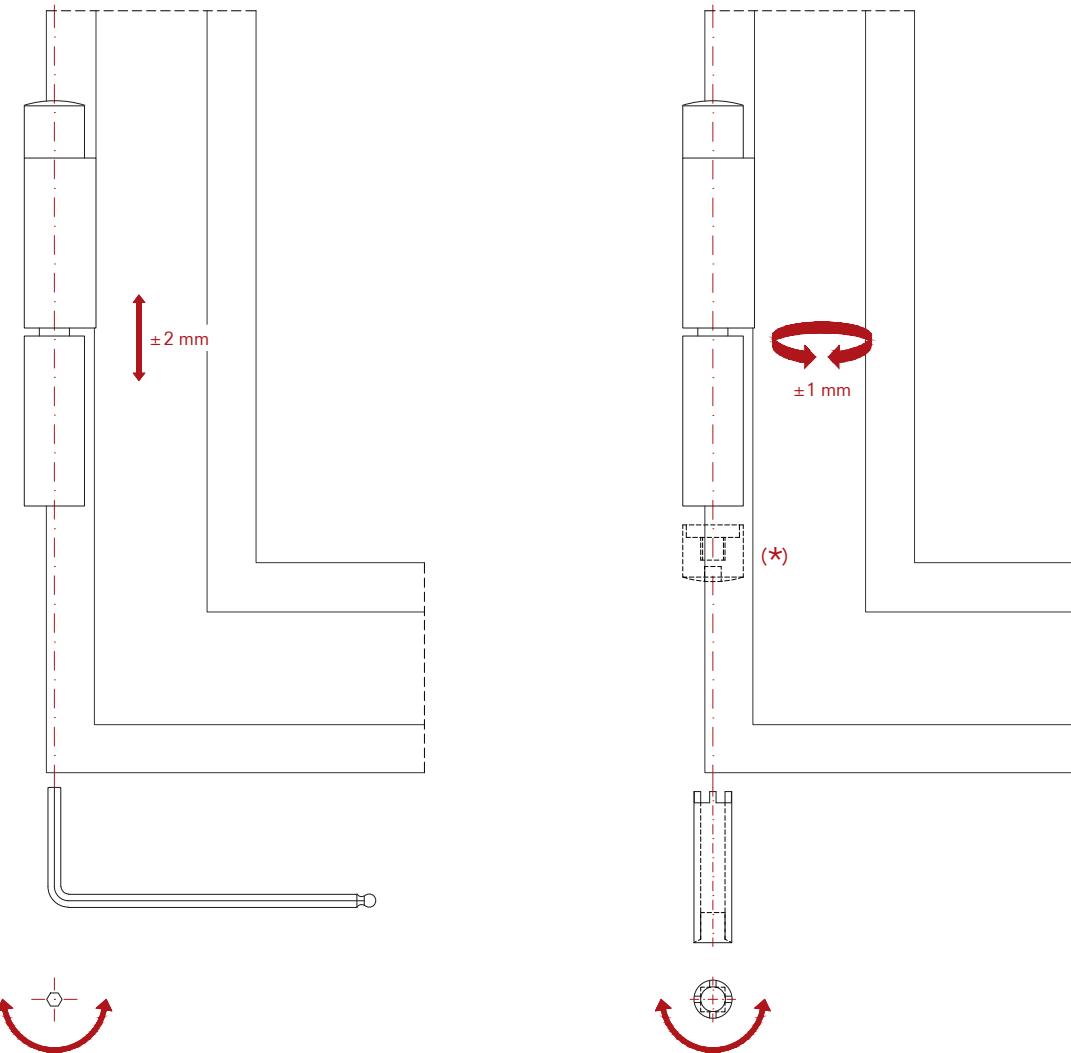

Para ajustar el casquillo de bronce, usar la llave de ajuste D99501-03. Ajustar bisagra superior e inferior antes de enganchar la hoja.

The hinge may only be welded on without brass bushings.

La cerniera deve essere saldata senza boccole in ottone.

la bisagra solo se puede soldar sin casquillos.

Use an allen key (4 mm, not included) for the upward and downward setting

Utilizzare una chiave a brugola (4 mm, non inclusa) per la regolazione verso l'alto e verso il basso

Use la llave allen (4 mm, no incluida) para el ajuste hacia arriba y hacia abajo

Use 1/4" allen key adjusting tool D99501-03 (Not included) for left and right setting

Per la regolazione destra e sinistra utilizzare una chiave da 1/4" su D99501-03 (non inclusa)

Para el ajuste a izquierda y a derecha use una llave allen 1/4" en D99501-03 (no incluido)

Note:

(*) After the installation mount all of the parts of the hinges to stop the adjustments and fix the caps.

Nota:

(*) Dopo l'installazione montare tutte le parti delle cerniere, bloccare le regolazioni e fissare i tappi.

Nota:

(*) Después de la instalación, monte todas las partes de las bisagras para detener los ajustes y arregla las tapas.

**Note**

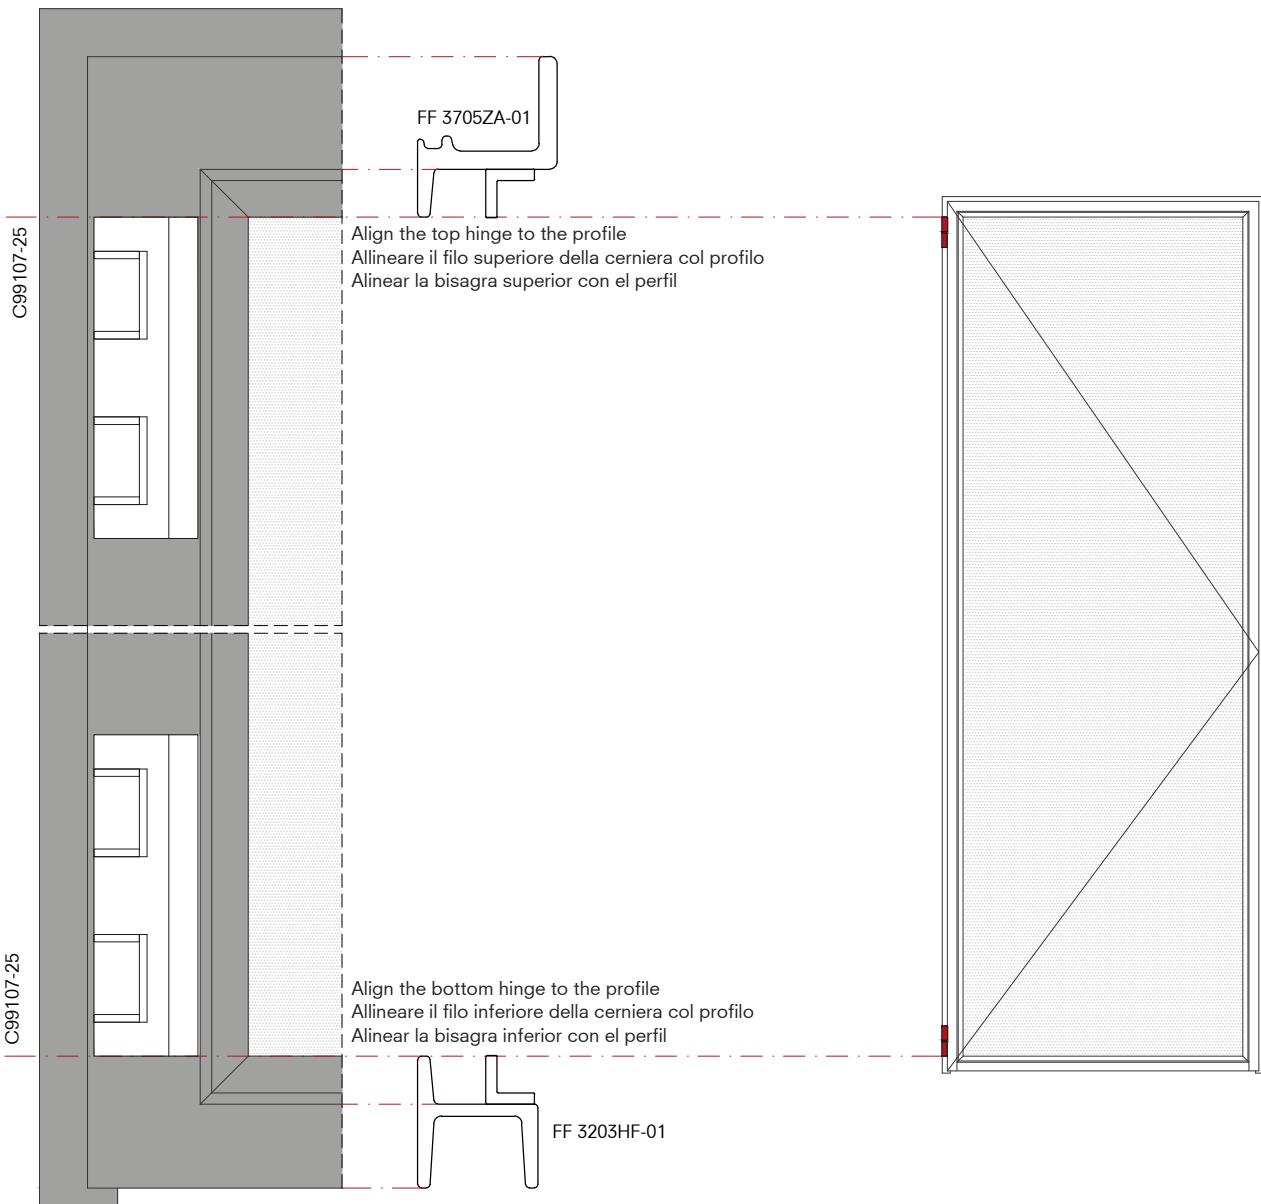

Please ensure that it is possible to unhinge the door leaf after installation.
This should be taken into account during the planning.

Nota

Assicurarsi che sia possibile smontare l'anta dopo l'installazione.
Da considerarsi sempre in fase di progettazione.

Nota

Asegúrese de que sea posible desenganchar la puerta después de la instalación.
Esto debe tenerse en cuenta durante la planificación.

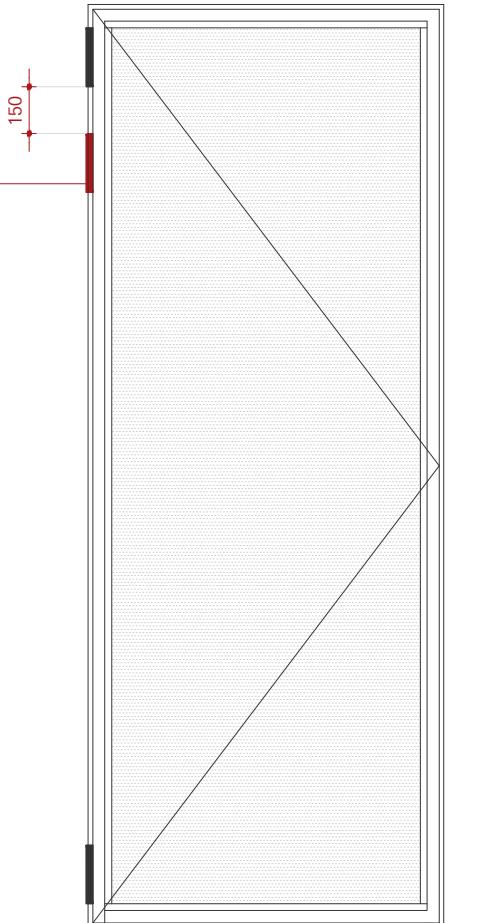

Rules for third hinge**Regole per la terza cerniera****Normas para tercera bisagra**

Third hinge at 150 mm
 Terza cerniera a 150 mm
 La tercera bisagra a 150 mm

The third hinge increases the load-bearing capacity by 15%

La terza cerniera aumenta la capacità di carico del 15%

La 3^a bisagra aumenta la capacidad de carga hasta un 15%

Use the third hinge if:
 Terza cerniera consigliata in caso di:
 Usar 3^a bisagra en los siguientes casos:

A Doors equipped with upper door closer
 Porte dotate di chiudiporta superiore
 Puertas equipadas con cierre en parte superior

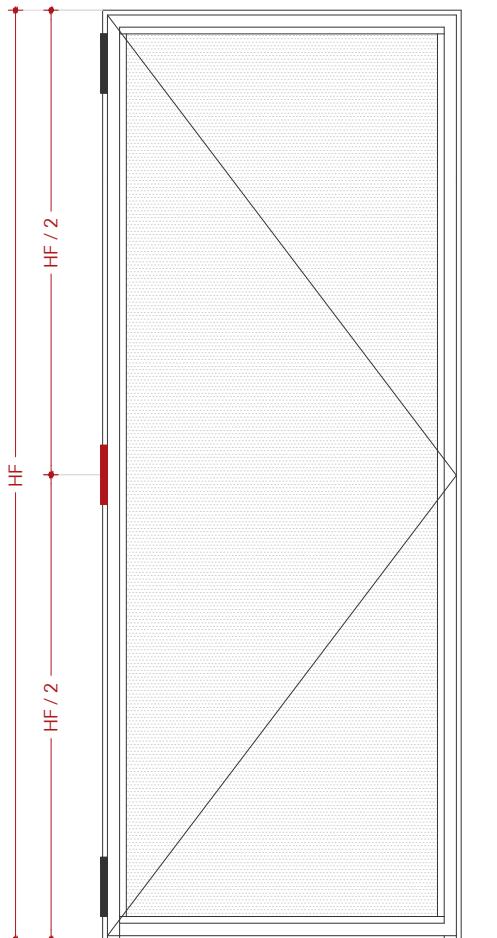

B Doors with panic bar (EN1125)
 Porte con maniglione antipanico (EN1125)
 Puertas con barra anti pánico (EN1125)

C Doors for intensive uses (schools, hospitals, ...)
 Porte ad uso intenso (scuole, ospedali, ecc.)
 Puertas de uso intenso (colegios, hospitales, etc.)

Rules for middle hinge

Regole per la cerniera centrale

Normas para la bisagra central

Middle hinge needed if:
Cerniera centrale necessaria se:
Bisagra media necesaria si:

Doors height is more than 2100 mm

Porte di altezza superiore a 2100 mm

La altura de la puerta es superior a 2100 mm

Note for all hinges:

Please ensure that it is possible to unhinge the door leaf after installation. This should be taken into account during the planning.

HF = Height Frame

Nota per tutte le cerniere:

Assicurarsi che sia possibile togliere l'anta dopo l'installazione. Questo dovrebbe essere preso in considerazione durante la progettazione.

HF = Altezza telaio

Nota para todas las bisagras:

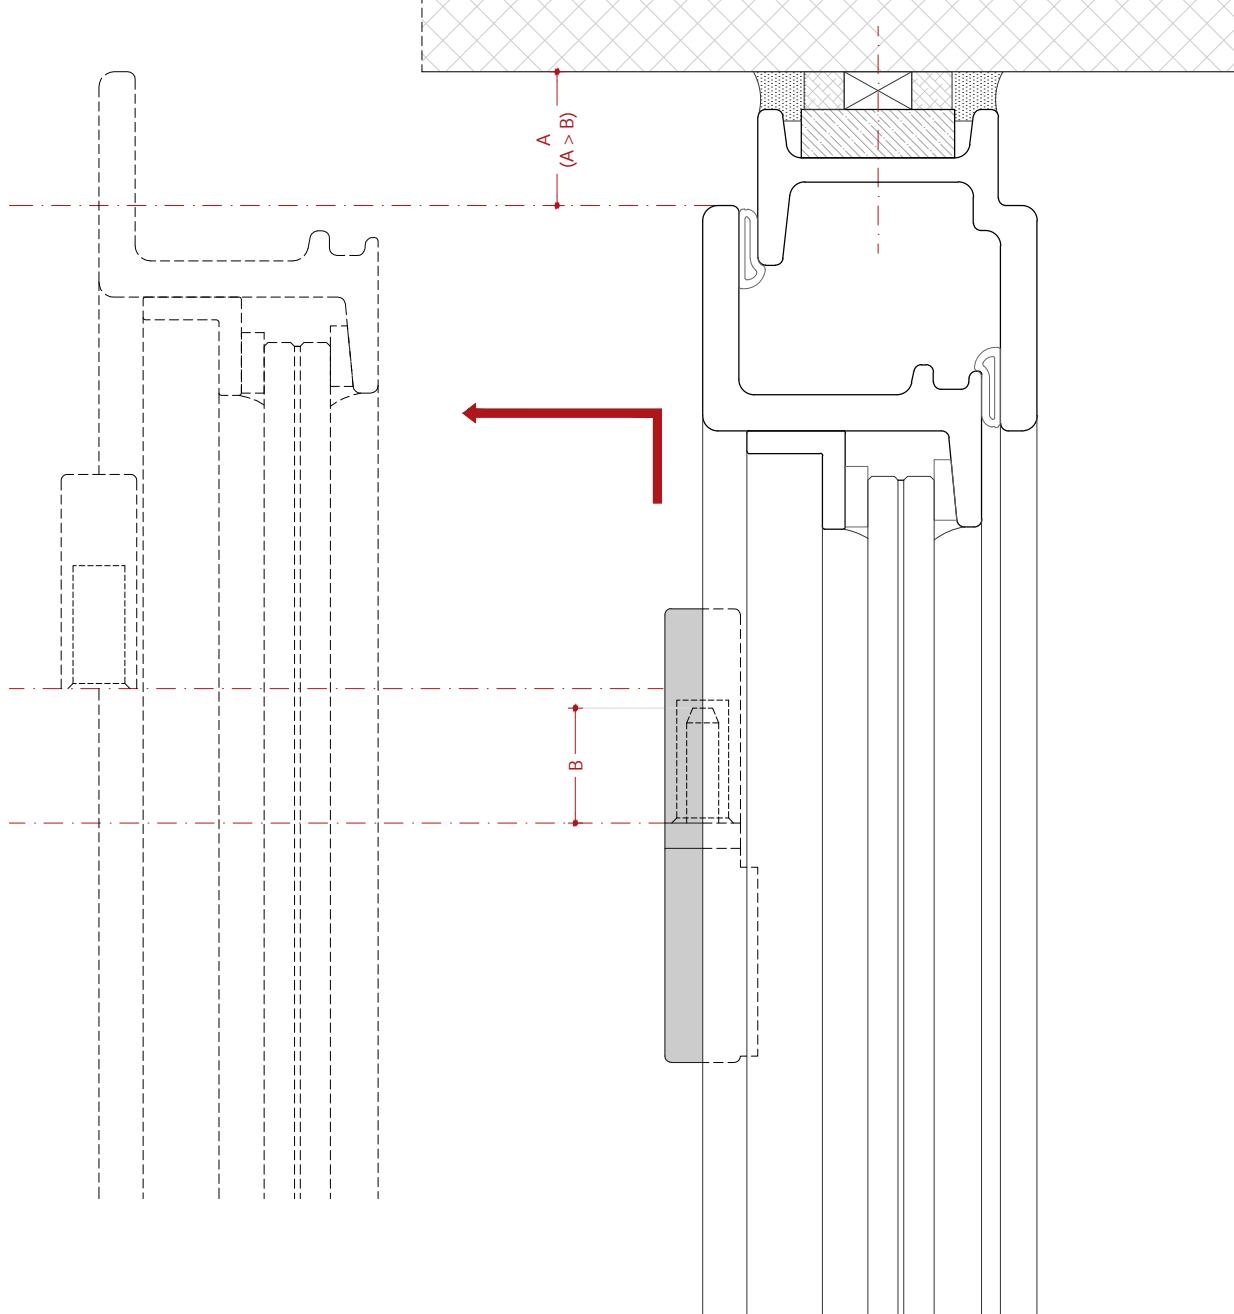

Asegúrese de que sea posible desenganchar la puerta después de la instalación. Esto debe tenerse en cuenta durante la planificación.

HF = Altura marco

**Recommendations
for installation**

**Raccomandazioni per
l'installazione in luce**

**Recomendaciones
para la instalación**

Note for all hinges:

In case of installation of the door "in the soffit" make sure that the necessary space is guaranteed to be able to remove the door from the hinges. Also evaluating a possible insertion, in the upper part, of a spacer element between the frame and the wall.

Nota per tutte le cerniere:

In caso di installazione della porta "in luce" assicurarsi che sia garantito lo spazio necessario per poter sfilare l'anta dalle cerniere. Valutando anche un eventuale inserimento, nella parte superiore, di un elemento distanziatore tra telaio e muratura.

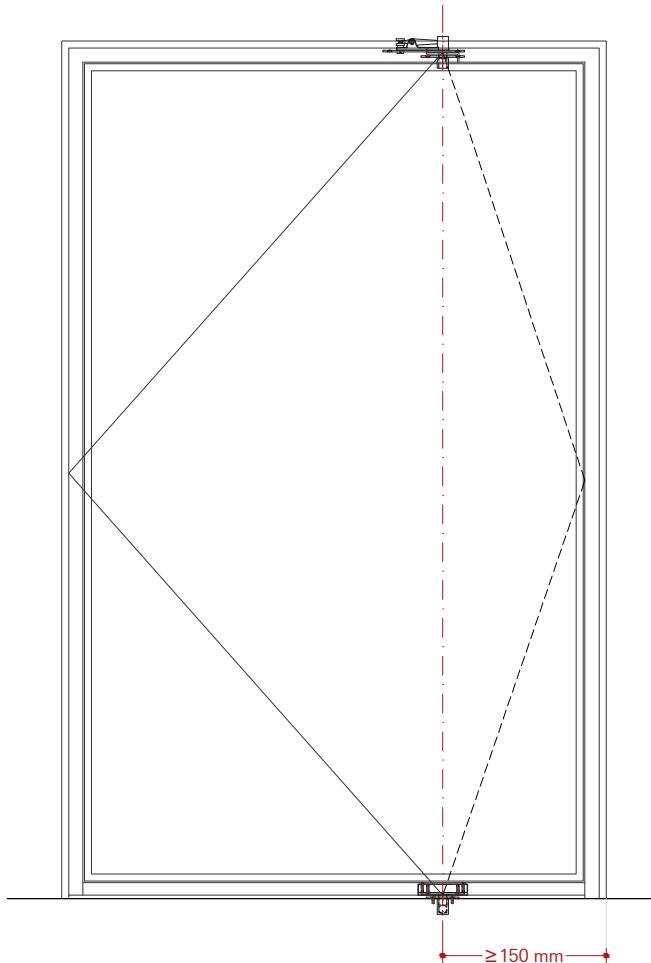

Nota para todas las bisagras:

En caso de instalación de la puerta "en la abertura" asegúrese de que se garantiza el espacio necesario para poder retirar la puerta de las bisagras. También se evalúa una posible inserción, en la parte superior, de un elemento distanciador entre el marco y la pared.

Finestra vasistas apertura interna

Ventana oscilante que se abre hacia dentro

- 1) Support shims
- 2) Distance shims
- 1*) For glazing units over one meter wide, the shims must be above the swivel bearing
- 2*) In case of swing door, they become support shims
- A) In the case of horizontal pivot openings, it is advisable to ask the Ottostumm technical office

- 1) Spessori di supporto
- 2) Spessori di distanza
- 1*) Per unità di vetratura larghe oltre il metro, gli spessori devono trovarsi sopra il cuscinetto girevole
- 2*) In caso di anta oscillante diventano spessori di supporto
- A) Nel caso di aperture a bilico orizzontale si consiglia di chiedere all'ufficio tecnico di Ottostumm

- 1) Espesores de soporte
- 2) Calzas de distancia
- 1*) Para acristalamientos de más de un metro de ancho, las calzas deben estar por encima del cojinete giratorio
- 2*) En caso de puerta batiente, se convierten en espesores de soporte
- A) En el caso de aberturas pivotantes horizontales, es recomendable consultar a la oficina técnica de Ottostumm.

**Ventilación del
acristalamiento**

6.1

Ventilation glazing rebate

If there is a high chance of moisture forming in the glazing rebate, appropriate ventilation must be provided.

In such cases, drainage holes and outlets must be provided to enhance air circulation and to keep moisture away from the insulated glazing.

Ventilazione vetrocamera

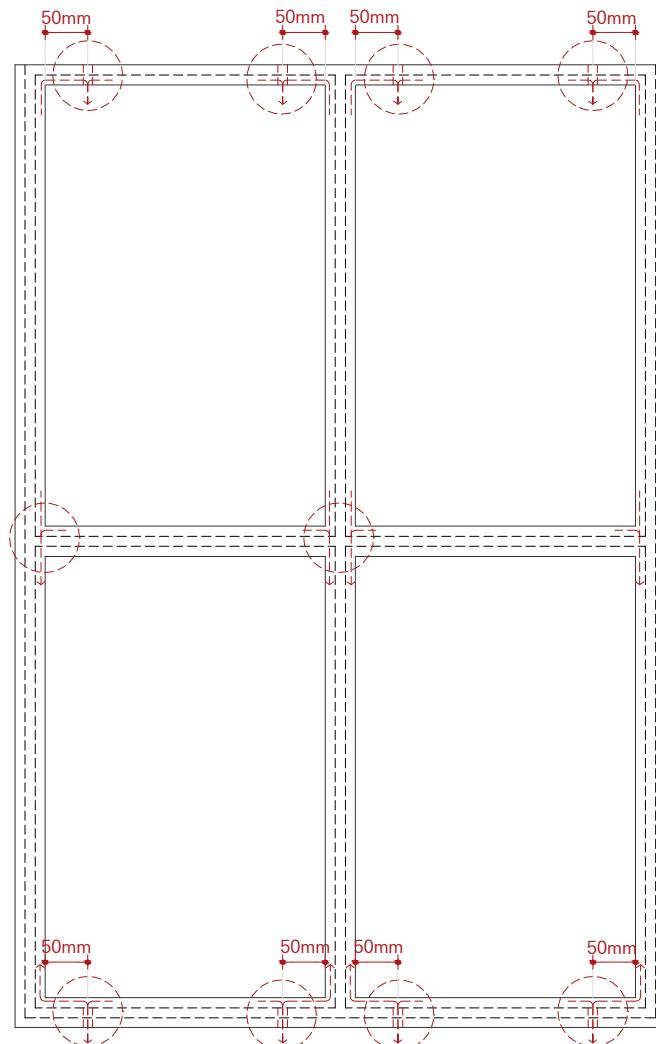

Se esiste un'alta possibilità di formazione di umidità nella battuta del vetro, deve essere fornita un'adeguata ventilazione.

In tal caso, devono essere previsti fori di drenaggio e aerazione per migliorare la circolazione dell'aria ed evitare formazione di umidità sui vetri isolanti.

Ventilación del acristalamiento

Si existe una alta probabilidad de que se forme humedad el galce del acristalamiento, se debe proporcionar una ventilación adecuada.

En tales casos, se deben proporcionar orificios de drenaje y salidas para mejorar la circulación del aire y mantener la humedad alejada del acristalamiento aislado.

 Procedimiento de pintura (ISO 12944) - basado en pinturas líquidas Sherwin Williams

Surface cleaning / Pulizia delle superfici / Limpieza de superficie

- Sand blast frames until metal gets almost white with grit Sa 2.5 for cycle C3-H/C4-M or sand blast frames until metal gets totally white with grit Sa 3 for cycle C5M-H.
- Clean up any debris of sand blasting with compressed air in order to obtain a perfectly cleaned surface.
- Apply the first primer layer within 2 hours from sand blasting or, in any case, before the oxidation process starts.
- Sabbiare i telai fino a quando il metallo diventa quasi bianco con graniglia Sa 2.5 per il ciclo C3-H/C4-M o sabbiare i telai fino a quando il metallo non diventa completamente bianco con graniglia Sa 3 per il ciclo C5M-H.
- Pulire dai residui della sabbia con aria compressa per ottenere una superficie perfettamente pulita.
- Applicare il primo strato di primer entro 2 ore dalla sabbia o, comunque, prima dell'inizio del processo di ossidazione.
- Lije los marcos con chorro de arena hasta que el metal se vuelva casi blanco con el grano Sa 2.5 para el ciclo C3-H/C4-M o lije los marcos con chorro de arena hasta que el metal se vuelva totalmente blanco con el grano Sa 3 para el ciclo C5M-H.
- Limpie cualquier residuo de chorro de arena con aire comprimido para obtener una superficie perfectamente limpia.
- Aplique la primera capa de imprimación dentro de las 2 horas posteriores al chorro de arena o, en cualquier caso, antes de que comience el proceso de oxidación.

Liquid painting options / Opzioni di verniciatura a liquido / Opciones de pintura líquida

Powder Coating

W20 profiles can be powder coated or wet painted.

Powder coating for outdoor use

Contact must be established in such a way to prevent any deformation of the profiles and frames. Additional support may be required for flexible profiles. All the holes and must be foreseen before the painting operations.

Process sequence**Preparation**

- Grind welding points, blast them if necessary (remove waviness).
- Degreasing and cleaning of all component surfaces.
- Roughening (in general sweeping) of all component surfaces / alternative: chemical surface treatment.

Painting cycle - sequence A

- Degreasing
- Flushing
- Zinc phosphating
- Flushing
- Spotting of welding and filing areas with epoxy powder primer, nominal coat thickness of 70 µm
- 1x polyester powder paint, nominal coat thickness of 60-90 µm

Painting cycle - sequence B

- Degreasing
- Flushing
- Zinc phosphating
- Flushing
- 1x full-surface epoxy powder primer, nominal coat thickness of 50-70 µm or 1x full-surface zinc powder primer, nominal coat thickness of 70 µm
- 1x polyester powder top coat, nominal coat thickness of 60-90 µm

The safety regulations and procedural instructions of the manufacturers must be observed.

Verniciatura a polvere

I profili W20 possono essere verniciati a liquido o a polvere.

Vernice in polvere per utilizzo esterno

Il supporto dei telai deve avvenire in modo tale da escludere ogni possibile deformazione. In caso di profili flessibili potrebbe essere necessario un supporto aggiuntivo. Tutti i fori e le lavorazioni devono essere previste prima delle operazioni di verniciatura.

Fasi del processo**Preparazione**

- Smerigliatura dei punti di saldatura, se necessario sabbatura (eliminare le ondulazioni).
- Rimozione del grasso e pulizia di tutte le superfici del componente.
- Preparazione meccanica (in genere sabbatura leggera, sweep) di tutte le superfici del componente / In alternativa: trattamento chimico della superficie

Ciclo verniciatura - svolgimento A

- Sgrassaggio
- Risciacquo
- Fosfatazione allo zinco
- Risciacquo
- Protezione dei punti saldati e limati con primer epossidico in polvere, spessore dello strato nominale 70 µm
- 1x vernice in polvere PE, spessore dello strato nominale 60-90 µm

Ciclo verniciatura - svolgimento B

- Sgrassaggio
- Risciacquo
- Fosfatazione allo zinco
- Risciacquo
- 1x primer epoxidico in polvere su tutta la superficie, spessore dello strato nominale 50 - 70 µm oppure 1x primer in polvere di zinco su tutta la superficie, spessore dello strato nominale 70 µm
- 1x vernice coprente in polvere PE, spessore dello strato nominale 60 - 90 µm

Osservare le precauzioni di sicurezza e le indicazioni sui metodi del produttore.

Recubrimiento en polvo

Los perfiles W20 se pueden pintar en húmedo y recubrirse con pintura en polvo.

Laca en polvo para uso en exteriores

El contacto debe realizarse de manera que los perfiles y marcos no puedan deformarse. Todos los oreficios y los procesos de poliuretano deben preverse antes de las operaciones de pintura.

Secuencia**Preparación**

- Lijar los puntos de soldadura o aplicar chorro si es necesario (eliminar ondulaciones).
- Desengrasar y limpiar todas las superficies de componentes.
- Raspado (p. ej. Sweeping) de todas las superficies de componentes/alternativa: tratamiento químico de la superficie.

Ciclo de pintura - secuencia A

- Desengrasado
- Enrojecimiento
- Realizar fosfatado de cinc
- Enrojecimiento
- Corrección de zonas de soldadura o lijado con imprimación de polvo de epóxidos, grosor nominal de capa 70 µm
- 1x capa de laca de polvo de poliéster, grosor nominal de capa 60-90 µm

Ciclo de pintura - secuencia B

- Desengrasado
- Enrojecimiento
- Realizar fosfatado de cinc
- Enrojecimiento
- 1x imprimación de polvo de epóxidos por toda la superficie, grosor nominal de capa 50-70 µm o 1x imprimación de polvo de cinc por toda la superficie, grosor nominal de capa 70 µm
- 1x capa de laca de polvo de poliéster de cobertura, grosor nominal de capa 60-90 µm

Deben tenerse en cuenta las normas de seguridad y las instrucciones del procedimiento de los fabricantes.

Powder coating for indoor use

Contact must be established in such a way to prevent any deformation of the profiles and frames. Additional support may be required for flexible profiles.

Process sequence

- Grind welding points, blast them if necessary (remove waviness).
- De-greasing and cleaning.
- Roughening of the surface (in general sweeping) or chemical pre-treatment.

Sequence A

- Zinc phosphating.
- 1x polyester powder top coat, nominal thickness layers of 80-120 µm

The safety regulations and procedural instructions of the manufacturers must be observed.

Sequence B

- Chromating (the adhesion of the intended powder coating to steel surfaces without a metal coating must be clarified).
- 1x polyester powder paint, nominal coat thickness of 80-120 µm

The safety regulations and procedural instructions of the manufacturers must be observed.

Powder coating

- see also DIN 55634

Process sequence

- Grind welding points, blast them if necessary (remove waviness).
 - Degreasing and cleaning of all component surfaces.
 - Roughening of all component surfaces / alternative: chemical surface treatment.
 - Primer coating: EP primer - nominal coat thickness of 60 µm
 - Top coat: PUR or polyester nominal coat thickness of 60 µm
- or
- 2x PUR - nominal coat thickness: 2 x 60 µm = 120 µm

Vernice in polvere per utilizzo interno

Il supporto dei telai deve avvenire in modo tale da escludere ogni possibile deformazione. In caso di profili flessibili potrebbe essere necessario un supporto aggiuntivo. I supporti devono essere previsti nelle zone metalliche dei profili.

Fasi del processo

- Smerigliatura dei punti di saldatura, se necessario sabbatura (eliminare le ondulazioni).
- Rimozione del grasso e pulizia.
- Preparazione meccanica della superficie (in genere sabbatura leggera, sweep) o pretratamento chimico.

Modalità di svolgimento A

- Fosfatazione allo zinco.
- 1x topcoat con vernice PE in polvere, spessore dello strato nominale 80-120 µm

Osservare le precauzioni di sicurezza e le indicazioni sui metodi del produttore.

Modalità di svolgimento B

- Cromatazione (verificare l'adesione della vernice in polvere utilizzata sulle superfici in acciaio senza rivestimento metalllico).
- 1x vernice PE in polvere, spessore dello strato nominale 80-120 µm

Osservare le precauzioni di sicurezza e le indicazioni sui metodi del produttore.

Rivestimento di polvere

- vedere anche DIN 55634

Fasi del processo

- Smerigliatura dei punti di saldatura, se necessario sabbatura (eliminare le ondulazioni).
 - Rimozione del grasso e pulizia di tutte le superfici del componente.
 - Preparazione meccanica di tutte le superfici del componente / In alternativa: trattamento chimico della superficie.
 - Rivestimento di base: Primer EP - spessore dello strato nominale 60 µm
 - Top coat: PUR o poliestere - spessore dello strato nominale 60 µm
- oppure
- 2x PUR - spessore dello strato nominale: 2 x 60 µm = 120 µm

Laca en polvo para uso en interiores

El contacto debe realizarse de manera que los perfiles y marcos no puedan deformarse.

Secuencia

- Lijar los puntos de soldadura o aplicar chorro si es necesario (eliminar ondulaciones).
- Desengrasar y limpiar.
- Embastar la superficie (p. ej. Sweeping) o tratamiento químico previo.

Secuencia A

- Realizar fosfatado de cinc
- 1x capa de laca de polvo de poliéster de cobertura, grosor nominal de capa 80-120 µm

Deben tenerse en cuenta las normas de seguridad y las instrucciones del procedimiento de los fabricantes.

Secuencia B

- Cromatar (la adherencia de la laca en polvo sobre las superficies de acero sin recubrimiento metálico debe comprobarse).
- 1x capa de laca de polvo de poliéster, grosor nominal de capa 80-120 µm

Deben tenerse en cuenta las normas de seguridad y las instrucciones del procedimiento de los fabricantes.

Revestimiento de polvo

- véase también DIN 55634

Secuencia

- Lijar los puntos de soldadura o aplicar chorro si es necesario (eliminar ondulaciones).
 - Desengrasar y limpiar todas las superficies de componentes.
 - Raspado de todas las superficies de componentes/alternativa: tratamiento químico de la superficie.
 - Revestimiento básico: Imprimación de epóxidos, grosor nominal de capa 60 µm
 - Revestimiento de cobertura: PUR o poliéster, grosor nominal de capa 60 µm
- o
- 2x capas PUR, grosor nominal de capa: 2 x 60 µm = 120 µm

VFF leaflet St. 01: 2015-10

Correlation of corrosivity categories, protection period and corrosion protection classes.

Scheda descrittiva VFF St. 01: 2015-10 Hoja de datos St. 01 VFF: 2015-10

Corrispondenze tra categorie di corrosività, durata della protezione e classi di protezione contro la corrosione.

Relación de categorías de corrosividad, duración de protección, accesibilidad y clases de protección contra corrosión.

Corrosivity category Categoria corrosività Categoría corrosividad	Protection period Periodo di protezione Período de protección	(1) Corrosion protection class Classe di protezione Clase de protección		Environment example outdoors Esempio di ambiente esterno Ejemplo de ambiente externo	Environment example indoors Esempio di ambiente interno Ejemplo de ambiente interno

Zonas costeras y mar adentro con alta concentración de sal.	Buildings or areas with almost constant condensation and heavy pollution. Edifici o aree con condensa quasi costante e forte inquinamento. Edificios o áreas con condensación casi constante y fuerte contaminación.
	Medium Medio Medio	III	> III ⁽²⁾		
	High Alto Alto	> III ⁽²⁾	> III ⁽²⁾		

(1) The indication of the corrosion protection class serves only the assignment of the previous building authority requirements to the new European classification system consisting of corrosivity category and protection period.

(2) The corrosion protection classes are not applicable in the event of very high corrosion loads and long protection periods as well as special loads. In the case of these loads and conditions, the necessary measures must be determined on a case-by-case basis.

Source: DIN 55634 table 1.

(1) L'indicazione della classe di protezione contro la corrosione serve solo per l'allineamento dei requisiti inerenti alla sorveglianza sulle costruzioni al nuovo sistema di classificazione europeo in base a categoria di corrosività e durata della protezione.

(2) In presenza di esposizione a corrosione intensa, durata della protezione prolungata e sollecitazioni particolari le classi di protezione contro la corrosione non sono applicabili. In simili circostanze e condizioni occorre definire le misure da adottare caso per caso.

Fonte: DIN 55634 Tabella 1.

(1) La indicación de la clase de protección contra corrosión solo sirve para asignar los requisitos antiguos de la obra al nuevo sistema de clasificación europeo compuesto por categoría de corrosividad y duración de protección.

(2) En caso de gran carga por corrosión y duración de protección, así como en caso de cargas especiales, las clases de protección contra corrosión no son aplicables. En este caso de cargas y condiciones deben determinarse las medidas individualmente para cada caso.

7.1 Foreword

The profile systems from OTTOSTUMM I Moggs are designed for use in door, window and façade construction. The high dimensional accuracy and straightness of the profiles makes them easy to be processed.

These documents are intended for specialist companies that are familiar with the relevant standards, directives and regulations.

Notes on construction suggestions and application examples:

- The illustrations shown are non-binding suggestions.
- The examples cannot cover every possible application.
- All relevant regulations are to be observed.
- The processing guidelines for the OTTOSTUMM I Moggs product ranges also apply.
- The static dimensioning of the profiles, anchors, dowels, screws and glazing must be determined independently by the executing company in accordance with the applicable standards, directives and regulations.
- In individual cases they must be checked for their usefulness and, if necessary, modified in consultation with the responsible architect, structural engineer and/or building physicist.
- The professional execution is the responsibility of the executing company.
- OTTOSTUMM I Moggs assumes no liability for this.

For all items contained in this documentation, as well as for all activities related to them (order, transport, etc.), our General Conditions and Terms, which can be downloaded at www.ottostumm-mogs.com, apply.

7.1 Premessa

I sistemi per profili di OTTOSTUMM I Moggs sono progettati per l'utilizzo nella costruzione di porte, portoni, finestre e facciate. L'elevata precisione dimensionale e la perfetta linearità dei profili semplificano la lavorazione. La presente documentazione è riservata ad aziende che hanno già dimestichezza con le norme, le direttive e le disposizioni in materia.

Note relative alle proposte di costruzione e agli esempi di applicazione:

- Le raffigurazioni fornite sono proposte non vincolanti.
- Gli esempi non possono coprire ogni singolo caso applicativo.
- Tenere conto di tutte le disposizioni vigenti in materia.
- Osservare anche le direttive di lavorazione dei diversi sistemi OTTOSTUMM I Moggs.
- Il dimensionamento statico dei profili, degli ancoraggi, dei tasselli, delle viti e delle vetrature deve essere definito dalla ditta esecutrice sotto la propria responsabilità e in conformità alle norme, direttive e disposizioni vigenti in materia.
- In circostanze particolari deve esserne verificata la fruibilità e, se necessario, devono essere apportate le dovute modifiche in accordo con i professionisti competenti.
- Della corretta esecuzione è responsabile la ditta esecutrice.
- OTTOSTUMM I Moggs è sollevata da qualsiasi responsabilità a riguardo.

Per ulteriori avvertenze, fare riferimento a quanto specificato nel Disclaimer.

Per tutti gli articoli contenuti nella presente documentazione, così come per ogni attività ad essi collegata (ordine, trasporto ecc) fanno fede le nostre Condizioni generali di vendita, scaricabili al sito www.ottostumm-mogs.com

7.1 Prólogo

Los sistemas de perfiles de OTTOSTUMM I Moggs han sido concebidos para su uso en la construcción de puertas, portales, ventanas y fachadas. La gran precisión y el carácter especialmente recto de los perfiles permite un procesamiento sencillo.

La presente documentación van dirigidas a empresas especializadas que están familiarizadas con las directivas y normativas aplicables.

Notas relativas a sugerencias de construcción y ejemplos de aplicación:

- Las representaciones indicadas son sugerencias no vinculantes.
- Los ejemplos no pueden representar todos los casos posibles de aplicación.
- Deben tenerse en cuenta todas las normas aplicables.
- Además, deben respetarse las directivas de procesamiento de los programas OTTOSTUMM I Moggs.
- El dimensionamiento estático de los perfiles, los anclajes, los tacos, tornillos y acristalamientos debe determinarlos la empresa responsable por su cuenta de conformidad con las normas, directivas y disposiciones vigentes.
- En casos individuales habrá que comprobar la viabilidad y puede ser necesario realizar cambios tras consulta con el arquitecto, ingeniero o calculistas.
- La responsabilidad de la realización correcta de estas tareas recae sobre la empresa encargada.
- OTTOSTUMM I Moggs no puede dar garantía alguna al respecto.

Para mayor información, diríjase a las cláusulas especificadas en la nota de descargo de responsabilidad.

Para todos los artículos contenidos en esta documentación, así como para todas las actividades ligadas (pedidos, transporte, etc) se aplican las condiciones generales de venta, que se pueden descargar desde www.ottostumm-mogs.com.

7.2 Materials

OTTOSTUMM I Mog profiles are produced in the following material variants:
A) Steel, material S235JR, 1.0038, hot rolled.
B) Steel, material S235JR, 1.0038, laser welded, beadblasted.
C) Steel, material S235JR, 1.0038, laser welded.
D) Aluminium alloy EN AW 6060 according to EN 573-3, T 66 condition according to EN 755-2 for supplementary profiles and glazing beads.

7.2 Materiali

I profili OTTOSTUMM I Mog sono realizzati nelle seguenti varianti di materiale:
A) Acciaio, materiale S235JR, 1.0038, laminato a caldo.
B) Acciaio, materiale S235JR, 1.0038, saldato laser, micropallinato.
C) Acciaio, materiale S235JR, 1.0038, saldato laser.
D) Lega di alluminio EN AW 6060 secondo EN 573-3, stato T 66 secondo EN 755-2 per profili complementari e listelli fermavetro.

7.2 Materiales

Los perfiles OTTOSTUMM I Mog se fabrican en las siguientes variantes de material:
A) Acero, material S235JR, 1.0038, laminado en caliente.
B) Acero, material S235JR, 1.0038, soldado con láser, micro-arenado.
C) Acero, material S235JR, 1.0038, soldado con láser.
D) Aleación de aluminio EN AW 6060 - de conformidad con EN 573-3, estado T 66 de conformidad con EN 755-2 para perfiles adicionales y junquillos.

7.3 European standards

EN 1993-1-1: Design of steel structures - Part 1-1: General rules and rules for buildings
 EN 1993-1 -1/NA: National Annex - Nationally determined parameters :- Design of steel structures - Part 1-1: General rules and rules for buildings
 EN 1993-1-2: Design of steel structures - Part 1-2: General rules - Structural fire design
 EN 1993-1 -2/NA: National Annex - Nationally determined parameters :- Design of steel structures - Part 1-2: General rules - Structural fire design
 EN 1993-1-5: Design of steel structures - Part 1-5: Plated structural elements
 EN 1993-1 -5/NA: National Annex - Nationally determined parameters :- Design of steel structures - Part 1-5: Plated structural elements
 EN 12944: Corrosion protection of steel structures by protective paint systems
 EN 12944-1: General introduction
 EN 12944-2: Classification of environments
 EN 12944-3: Design considerations
 EN 12944-4: Types of surface and surface preparation
 EN 12944-5: Protective paint systems
 EN 12944-6: Laboratory performance test methods
 EN 12944-7: Execution and supervision of paint work
 EN 12944-8: Development of specifications for new work and maintenance

7.3 Norme europee

EN 1993-1-1: Misurazione e progettazione di strutture in acciaio - Parte 1-1: Regole generali e regole per gli edifici
 EN 1993-1 -1/NA: Allegato nazionale - Parametri definiti a livello nazionale:- Misurazione e progettazione di strutture in acciaio - Parte 1-1: Regole generali e regole per gli edifici
 EN 1993-1-2: Misurazione e progettazione di strutture in acciaio - Parte 1-2: Regole generali - Progettazione di strutture portanti in caso di incendio
 EN 1993-1 -2/NA: Allegato nazionale - Parametri definiti a livello nazionale:- Misurazione e progettazione di strutture in acciaio - Parte 1-2: Regole generali - Progettazione di strutture portanti in caso di incendio
 EN 1993-1-5: Misurazione e progettazione di strutture in acciaio - Parte 1-5: Elementi strutturali a lastra
 EN 1993-1 -5/NA: Allegato nazionale - Parametri definiti a livello nazionale :- Misurazione e progettazione di strutture in acciaio - Parte 1-5: Elementi strutturali a lastra
 EN 12944: Protezione dalla corrosione di strutture in acciaio mediante verniciatura
 EN 12944-1: Informazioni generali, termini, corrosione
 EN 12944-2: Suddivisione delle condizioni ambientali
 EN 12944-3: Regole di base per la progettazione
 EN 12944-4: Tipi di superficie e preparazione della superficie
 EN 12944-5: Sistemi di verniciatura
 EN 12944-6: Probe in laboratorio per la valutazione dei sistemi di verniciatura
 EN 12944-7: Esecuzione e supervisione dei lavori di verniciatura
 EN 12944-8: Stesura di specifiche per lavori nuovi e di manutenzione

7.3 Normas europeas

EN 1993-1-1: Proyecto de estructuras de acero. Parte 1-1: Reglas generales y reglas para edificios.
 EN 1993-1 -1: Anejo Nacional: Parámetros de determinación nacional: Proyecto de estructuras de acero. Parte 1-1: Reglas generales y reglas para edificios.
 EN 1993-1-2: Proyecto de estructuras de acero. Parte 1-2: Reglas generales. Proyecto de estructuras sometidas al fuego.
 EN 1993-1 -2: Anejo Nacional: Parámetros de determinación nacional: Proyecto de estructuras de acero. Parte 1-2: Reglas generales. Proyecto de estructuras sometidas al fuego.
 EN 1993-1-5: Proyecto de estructuras de acero. Parte 1-5: Placas planas cargadas en su plano.
 EN 1993-1 -5: Anejo Nacional: Parámetros de determinación nacional: Proyecto de estructuras de acero. Parte 1-5: Placas planas cargadas en su plano.
 EN 12944: Protección de estructuras de acero frente a la corrosión mediante sistemas de pintura protectores
 EN 12944-1: Introducción general.
 EN 12944-2: Clasificación de ambientes.
 EN 12944-3: Consideraciones sobre el diseño.
 EN 12944-4: Tipos y preparación de superficies.
 EN 12944-5: Sistemas de pintura protectores.
 EN 12944-6: Ensayos de comportamiento en laboratorio.
 EN 12944-7: Ejecución y supervisión de trabajos de pintado.
 EN 12944-8: Desarrollo de especificaciones para trabajos nuevos y mantenimiento.

7.4 Order

Delivery lengths of profiles and packaging units of accessories and fittings are included in the program list. In the case of insulate profiles, the outside unfolding specified for profiles contains the entire visible unfolding. The specified weights per metre apply to the corresponding material and the weights of the composite webs are included in the insulated profiles.

7.4 Ordine

Le lunghezze di fornitura dei profili e le confezioni di accessori e ferramenta sono indicate nel catalogo. In caso di profili taglio termico lo sviluppo esterno si riferisce all'intero sviluppo visibile. I pesi al metro indicati si riferiscono al rispettivo materiale e in caso di profili taglio termico sono inclusi anche i pesi delle anime isolanti di collegamento.

7.5 Transport and storage

OTTOSTUMM | Mog profiles are treated and pack extremely carefully at the factory to rule out any corrosion and mechanical damage at the distribution warehouses and during transport to the processor.

The risk is transferred to the purchaser when the goods are handed over to a freight forwarder or carrier, at the latest, however, when they leave the warehouse or the supplying plant.

Unloading operations can be carried out with an overhead crane or forklift truck.

Only forklift trucks with wide forks set at a large distance may be used for unloading and transport.

For the timely notification of transport damage and other material defects, the corresponding information in our terms of sale shall apply.

OTTOSTUMM | Mog profiles must be stored separately according to the material in order to exclude a risk of corrosion due to extraneous rust particles on stainless steel and aluminium. Dry storage in suitable rooms must be ensured to avoid corrosion. Short-term strong temperature fluctuations in the storage room should be avoided in view of possible condensation water formation in the profile stack.

The profiles must rest on wood or plastic, materials which must not contain any aggressive substances that could trigger chemical reactions at the contact surfaces with the profiles.

Scratches, indentations or other deformation or damage to the surface must be avoided during storage and transport. This applies in particular to the interim storage of profiles that have already been subjected to surface treatment. They may be removed from storage racks only by lifting them out.

For businesses that process aluminium as well as steel, it is a matter of course that strict spatial separation of these materials is ensured both during storage and processing. The formation of white rust in continuously hot-dip materials does not constitute a reason for complaint.

7.5 Trasporto e stoccaggio

I profili OTTOSTUMM | Mog vengono trattati e imballati in magazzino con estrema accortezza per proteggerli dalla corrosione e da possibili danni meccanici che possono subire nei magazzini di distribuzione e durante il trasporto verso il produttore di serramenti. Con l'affidamento della merce a un vettore o trasportatore, e comunque al più tardi all'uscita dal magazzino o dallo stabilimento di produzione, il rischio viene trasferito al cliente. Le operazioni di scarico possono avvenire con carriole o con carrello elevatore. Se si utilizza un carrello elevatore per scaricare e trasportare la merce, le forze dell'elevatore devono essere larghe e regolate alla massima distanza. Per la segnalazione tempestiva di eventuali danni dovuti al trasporto o altri difetti strutturali valgono le indicazioni relative contenute nelle nostre condizioni di vendita.

I profili OTTOSTUMM | Mog devono essere obbligatoriamente stoccati in base al materiale per evitare il pericolo di corrosione dovuto a particelle di ruggine volatile che vengono a contatto con l'acciaio inossidabile e l'alluminio. Per evitare la corrosione deve essere garantito uno stoccaggio in locali adeguatamente protetti dall'umidità. Variazioni brusche della temperatura all'interno del luogo di stoccaggio devono essere evitate per impedire la formazione di acqua di condensa tra i profili. I profili devono poggiare su legno o plastica, materiali che non devono contenere sostanze aggressive che potrebbero innescare reazioni chimiche nei punti di contatto tra i profili. Evitare graffi, impronte, deformazioni o danni superficiali di qualunque natura durante l'immagazzinaggio e il trasporto. Ciò vale in particolare in caso di stoccaggi intermedi di profili già sottoposti a trattamento della superficie. Il prelievo dai luoghi di stoccaggio può avvenire soltanto per sollevamento.

In aziende che prevedono la lavorazione di alluminio oltre a quella dell'acciaio è ovviamente necessario predisporre una rigida separazione degli spazi adibiti alla lavorazione, ma anche allo stoccaggio di questi due materiali. La formazione di ossidazione bianca sui materiali sottoposti ad affinazione continua mediante immersione a caldo non costituisce motivo di reclamo.

7.4 Pedido

Las longitudes de suministro y las unidades de embalaje de accesorios y herramientas se pueden consultar en los listados. En el caso de los perfiles de unión, la estructura exterior indicada incluye toda la estructura visible. Los pesos por metro se refieren al material correspondiente y en el caso de los perfiles de unión se incluye el peso de las barras de unión.

7.5 Transporte y almacenamiento

Los perfiles de OTTOSTUMM | Mog se tratan con la máxima diligencia en fábrica para evitar corrosión y daños mecánicos en los almacenes de distribución y en el transporte a la empresa procesadora.

La responsabilidad sobre la mercancía se transfiere al comprador en el momento de la entrega a la empresa de transporte o el encargado de transporte y, como muy tarde, en el momento en el que la mercancía abandona el almacén o la fábrica proveedora.

Las operaciones de descarga se pueden realizar con un puente grúa o carro elevador. Si se realizan descargas y transportes con carretilla elevadora, solo se deben emplear horquillas anchas y ajustadas a distancias amplias. En cuanto a los plazos de comunicación de daños de transporte u otros imperfectos materiales se aplican las indicaciones correspondientes en nuestras condiciones de venta.

Los perfiles de OTTOSTUMM | Mog deben almacenarse obligatoriamente separados por material para evitar cualquier posibilidad de corrosión por partículas de óxido ajeno en el acero y el aluminio inoxidables. Para evitar la corrosión hay que garantizar un almacenamiento en seco en espacios adecuados. Deben evitarse las oscilaciones térmicas repentinas en el espacio de almacenamiento para evitar la posible formación de agua de condensación en las pilas de los perfiles. Los perfiles deben apilarse sobre madera o plástico, materiales que no tienen que contener sustancias agresivas que puedan provocar reacciones químicas en las superficies de contacto con los perfiles. Durante el transporte y el almacenamiento deben evitarse arañazos, abolladuras o cualquier otra deformación o forma de daño en las superficies. Hay que tener especial cuidado en los almacenamientos temporales de los perfiles cuyas superficies ya han sido tratadas. Para retirar los perfiles de sus estructuras de almacenamiento siempre se deben elevar, nunca arrastrar.

En el caso de empresas que aparte de acero también procesan aluminio, debe preverse una separación física estricta de ambos materiales tanto durante el almacenamiento como el procesamiento. La formación de óxido blanco en los materiales continuo en caliente no representa un motivo de reclamación.

7.6 Processing

7.6.1 General

Special attention must be paid to the strictly separate processing of the materials steel and stainless steel or aluminum. No tools of any kind must be mutually shared.

Width and height tolerances of ± 1 mm beyond the outer dimensions apply to the production of the frames unless expressly stated otherwise in the product chapters.

For the sealing of joint zones not closed by welding in joined frame connections, we strongly recommend using a narrow joint sealant. OTTOSTUMM I Mogs door fittings are supplied with initial factory lubrication and do not need to be greased during installation. Information on further maintenance can be found in the processing guidelines. Window fittings must be greased slightly during installation in accordance with the instructions in the fitting packaging. The profiles made of hot-dip carbon steel correspond in terms of their processability to commercially available carbon steel of comparable strength. Observe the wall thickness of 1.5 mm and - in particular when welding - the zinc-magnesium coating.

Commercially available products for machining carbon steel are to be used as coolants and lubricants.

7.6 Lavorazione

7.6.1 Aspetti generali

Prestare particolare attenzione alla lavorazione separata di acciaio, acciaio inox e alluminio. Gli utensili di qualsiasi tipo non devono essere utilizzati in modo alternato per le diverse lavorazioni.

Salvo diversamente indicato nei capitoli dedicati, la tolleranza di larghezza e altezza ammessa per la fabbricazione dei telai è di ± 1 mm rispetto alla misura esterna.

Per l'isolamento delle fughe in corrispondenza delle giunzioni del telaio che non vengono saldate si consiglia vivamente l'utilizzo di un apposito sigillante per fughe sottili. Le ferramenta per porte OTTOSTUMM I Mogs sono fornite con una prima lubrificazione in fabbrica e non deve essere aggiunto grasso durante il montaggio. Per informazioni sulla manutenzione successiva fare riferimento alle direttive di lavorazione. Le ferramenta per finestre devono essere leggermente lubrificate durante il montaggio secondo quanto riportato sulle confezioni.

I profili in acciaio al carbonio zincati mediante immersione a caldo presentano una lavorabilità analoga a quella degli altri acciai al carbonio comunemente reperibili sul mercato. Da tenere in particolare considerazione è lo spessore della lamiera pari a 1.5 mm e la presenza del rivestimento in zinco-magnesio, specialmente durante la saldatura.

Durante la lavorazione degli acciai al carbonio, impiegare prodotti di raffreddamento e lubrificazione comunemente disponibili in commercio.

7.6 Procesamiento

7.6.1 Generalidades

Hay que prestar especial atención a la separación de los materiales de acero o acero inoxidable y el aluminio. Las herramientas no se pueden emplear de forma conjunta para ambos materiales.

Si no se establece expresamente lo contrario en los capítulos concretos del producto, la tolerancia aplicable de anchura y altura para la fabricación de marcos es de ± 1 mm

Para sellar zonas de fuga cerradas mediante procesos distintos a la soldadura en el caso de las uniones de marcos (unión a tope o con inglete) recomendamos encarecidamente el uso del agente sellante para fugas.

Los herrajes de puertas OTTOSTUMM I Mogs se suministran con una lubricación inicial de fábrica y no necesitan engrasarse durante el montaje. Las indicaciones sobre el mantenimiento posterior deben consultarse en las directivas de procesamiento. Los herrajes de ventana deben engrasarse ligeramente en el montaje tal y como se indica en las instrucciones de los embalajes de los herrajes.

Los perfiles de acero al carbono galvanizado en caliente cuentan con la misma procesabilidad que los aceros al carbono habituales del mercado con una resistencia comparable. Debe tenerse en cuenta su grosor de pared de 1.5 mm y, especialmente a la hora de soldar, el recubrimiento de cinc-magnesio.

Como agentes refrigerantes y lubricantes deben emplearse los productos habituales del sector para la mecanización de aceros al carbono.

7.6.2 Sawing

Particular attention must be paid to the clamping of sectional steel profiles. Special cutting supports corresponding to the profile shapes must be inserted for this purpose.

Cuts are usually made with metal cold circular saws, which can make angle cuts within a range of $\pm 90^\circ$. However, high-performance band saws or hand saws can be used also for simple, straight cuts.

Only HSS saw blades are to be used.

Fine toothed is required for OTTOSTUMM I Mogs profiles.

Cutting speed: 20-40 m/min.

Tooth pitch: 4-6 mm

Saw blade thickness: 2.4 to 4 mm

The specifications depend on the type of machine used.

Universal cold circular saws are recommended as sawing machines.

7.6.2 Taglio a sega

Prestare particolare attenzione al bloccaggio dei profili in acciaio. A tal riguardo, utilizzare le dimesse di taglio specifiche.

I tagli vengono eseguiti in genere con seghette circolari per metallo a freddo; i tagli ad angolo possono essere eseguiti in un range tra $\pm 90^\circ$. Per tagli diritti più semplici possono essere utilizzate anche seghette a nastro ad alte prestazioni o seghette manuali.

Utilizzare unicamente lame per seghette HSS.

Per i profili OTTOSTUMM I Mogs è richiesta una dentatura fine.

Velocità di taglio: 20-40 m/min.

Passo dei denti: 4-6 mm

Spessore della lama: da 2.4 a 4 mm

I dati indicati dipendono dal tipo di macchinario utilizzato.

Si consiglia l'utilizzo di seghette circolari a freddo universali.

7.6.2 Corte con sierra

Hay que prestar atención especial a la sujeción de tubos perfilados de acero. En este contexto, hay que usar hojas de sierra adecuadas a las formas de perfil.

Por norma general, los cortes a medida se realizan con sierras circulares para corte de metales en frío con capacidad para realizar cortes angulares de $\pm 90^\circ$. No obstante, para realizar otros cortes más sencillos y rectos se pueden emplear sierras de alto rendimiento o sierras manuales.

Solo se deben emplear hojas de sierra HSS. Los perfiles de OTTOSTUMM I Mogs requieren un dentado fino.

Velocidad de corte: 20-40 m/min.

División de dientes: 4-6 mm

Grosor de hoja de sierra: 2.4 a 4 mm

Las indicaciones propuestas dependen del tipo de máquina empleado.

Se recomiendan sierras circulares universales de corte en frío.

7.6.3 Drilling

Drilling jigs or templates should always be used. The drills - standard range (HSS) - must be ground exactly and always kept sharp (reground). Angles, cutting edges and relief cuts to the core must be symmetrical. Point angle of 116° - 118° .

7.6.3 Foratura

Utilizzare sempre schemi o dimesse di foratura. Le punte - gamma comune (HSS) - devono essere affilati con precisione e l'affilatura deve essere costantemente manutenuta (affilatura periodica). Gli angoli, i profili del tagliente e gli angoli di spoglia rispetto al nucleo della punta devono essere simmetrici. Angolo di punta 116° - 118° .

7.6.3 Taladrado

Siempre debe emplear calibres o plantillas de taladro.

Los taladros, gama habitual (HSS), deben mantenerse siempre bien lijados y afilados (reaflilar). Cualquier ángulo, borde de corte o lijado posterior con respecto al alma debe ser simétrico. Ángulo punta 116° - 118° .

Drilling Ø [mm]	Speed [rpm]	Feed rate [mm/rev.]	Foro Ø [mm]	Velocità [rpm]	Avanzamento [mm/giro]	Taladro Ø [mm]	Velocidad [rpm]	Avance [mm/vuelta]
3	1000	0.11	3	1000	0.11	3	1000	0.11
4.8	780	0.12	4.8	780	0.12	4.8	780	0.12
5.2	730	0.125	5.2	730	0.125	5.2	730	0.125
6	625	0.13	6	625	0.13	6	625	0.13
7	560	0.14	7	560	0.14	7	560	0.14
8	500	0.145	8	500	0.145	8	500	0.145
9.2	410	0.165	9.2	410	0.165	9.2	410	0.165

Spray cooling for large cross-sections increases the tool life.

In caso di sezioni di grandi dimensioni il raffreddamento a spruzzo prolunga la vita utile dell'utensile.

La refrigeración por pulverización en las secciones más amplias aumenta la vida útil de las herramientas.

7.6.4 Tapping and thread cutting

Use HSS tools. The cutting speed is approx. 10% higher than with alloyed steels.

7.6.5 Milling

The milling cutters - standard range (HSS) - must be ground exactly and always kept sharp (reground). Angles, cutting edges and relief cuts must be symmetrical. The required milling work must be carried out with tools for thin-walled profiles (with profile miller or machining centre for steel and stainless steel).

7.6.6 Welding

The carbon steel can be melt-welded and resistance-welded with all the processes commonly used in practice. As for alloyed steel, gas fusion welding is not recommended (distortion due to large-area heating of the profiles). Particularly suitable are:

- Metal active gas welding (MAG)
- Metal inert gas welding (MIG)

7.6.7 Welding station

When welding elements, make sure the working surface is absolutely flat! A suitable welding table with fasteners is recommended for this purpose.

The welding station should always be well ventilated.

Smoke extraction systems are recommended here! The relevant regulations must be observed.

7.6.8 Straightening work

If, despite all precautions, slight distortions occur in the frame and sash, they should be straightened using suitable spindle presses or other straightening machines.

7.6.9 Plastering

The weld seams are usually plastered with an angle grinder (for further information, refer to the processing guidelines).

In order to achieve a clean visible surface of the element and ensure the exact function of the glazing bead, the corners must be treated with a file.

7.6.4 Filettatura

Utilizzare utensili HSS. È richiesta una velocità di taglio del 10% superiore a quella impiegata con gli acciai legati.

7.6.5 Fresatura

Le frese - gamma comune (HSS) - devono essere affilate con precisione e l'affilatura deve essere costantemente manutenuta (affilatura periodica). Gli angoli, i profili del tagliente e le spoglie devono essere simmetrici. Le operazioni di fresatura richieste devono essere eseguite con utensili per profili in lamiera sottile (con frese a pantografo o centri di lavorazione per acciaio e acciaio inox).

7.6.6 Saldatura

L'acciaio al carbonio può essere saldato con tutti i comuni metodi di saldatura per fusione o a resistenza. Come con gli acciai legati si consiglia l'uso della saldatura ossiacetilenica (deformazione a causa del riscaldamento di un'ampia superficie del profilo). I metodi particolarmente adatti sono i seguenti:

- Saldatura ad arco con metallo sotto protezione di gas attivo (MAG)
- Saldatura ad arco con metallo sotto protezione di gas inerte (MIG)

7.6.7 Postazione di saldatura

Per la saldatura degli elementi è richiesta una superficie di lavoro assolutamente in piano. Si consiglia pertanto l'utilizzo di un apposito banco di saldatura con mezzi di fissaggio. La postazione di saldatura deve essere sempre ben ventilata. Si consiglia l'utilizzo di un impianto di aspirazione dei fumi. Osservare le disposizioni vigenti in materia.

7.6.8 Lavori di rettifica

Se, nonostante tutte le precauzioni del caso, i telai o i battenti subiscono lievi deformazioni, è possibile rettificarli con l'impiego di apposite presse a bilanciere o altri macchinari di rettifica.

7.6.9 Ripulitura

I cordoni di saldatura vengono rifiniti solitamente con la smerigliatrice angolare (per ulteriori indicazioni vedere le direttive di lavorazione). Per ottenere una superficie visibile dell'oggetto pulita e per garantire il corretto funzionamento dei profili fermavetro, è necessario ripassare gli angoli con una lima.

7.6.4 Taladrado y corte rosulado

Emplear herramientas HSS. La velocidad de corte es aprox. un 10% superior que la de los aceros de aleación.

7.6.5 Fresado

Las fresas, gama habitual (HSS), deben mantenerse siempre bien lijadas y afiladas (reafilar). Cualquier ángulo, borde de corte o lijado posterior ser simétrico. Los trabajos de fresado requeridos deben llevarse a cabo con perfiles de paredes finas (con fresa de copia o centro de mecanizado para acero y acero inoxidable).

7.6.6 Soldadura

El acero al carbono se puede soldar a resistencia o a fusión con todos los procedimientos habituales en la práctica. Al igual que en el caso del acero de aleación, debe evitarse la soldadura de fusión de gas (deformación por calentamiento de grandes superficies de los perfiles). Los siguientes tipos son especialmente adecuados:

- Soldadura de metal por gas activo (MAG)
- Soldadura de metal por gas inerte (MIG)

7.6.7 Puesto de soldadura

Al soldar los elementos debe garantizarse que la superficie de trabajo está totalmente nivelada. En este caso, recomendamos una mesa de soldadura adecuada con medios de fijación. El puesto de soldadura siempre debe estar bien ventilado.

En este contexto, recomendamos el uso de dispositivos de extracción de humo. Deben tenerse en cuenta todas las normas aplicables.

7.6.8 Enderezamiento

Si a pesar de tomar todas las precauciones surgen pequeñas deformaciones en el marco y las hojas, deben corregirse mediante prensas de husillo u otros dispositivos de ajuste.

7.6.9 Acabado

Normalmente los cordones de soldadura se repasan con la lijadora angular (más información en las directivas de procesamiento). Para obtener una superficie limpia del elemento y para garantizar el funcionamiento preciso de la barra de soporte de cristal, hay que repasar las esquinas con una lima.

7.7 Surface treatment

7.7.1 General notes, coating

The surface treatment serves corrosion protection and colour design. With steel profiles, it must always be carried out after machining. Exception: aluminium profiles. Coating accumulation should be avoided, in particular in the area of the sealing and glazing bead mounting zones.

Decisive are:

- EN ISO 12944 Corrosion protection of steel structures by protective paint systems
- DIN 55634 - Paints, varnishes and coatings
- Corrosion protection of supporting thin-walled building components made of steel
- Guideline from GSB or Qualicoat for piece coating of steel parts
- Also refer to VFF leaflet ST.01

In the case of high corrosion loads and a long protection period (e.g. windows near the coast) and special loads, the suitable corrosion protection system must be determined in each individual case.

The manufacturer of the coating material must prove the suitability of their product for the coating of the profiles and the corrosion protection of the overall system (primer and top coat, weld seam area, cutting edge).

7.7 Trattamento della superficie

7.7.1 Aspetti generali, la verniciatura

Il trattamento della superficie è necessario per la protezione contro la corrosione e per la finitura cromatica dell'oggetto. In linea di massima va eseguito dopo la lavorazione dei profili in acciaio. Eccezione: profili in alluminio. Evitare gli accumuli di rivestimento in particolare nelle zone delle guarnizioni e delle sedi dei profili fermavetro.

Riferimenti normativi:

- EN ISO 12944 Protezione dalla corrosione di strutture di acciaio mediante verniciatura e rivestimento
- DIN 55634 - Verniciature e rivestimenti - Protezione anticorrosione di componenti portanti in lamina d'acciaio sottile
- Direttiva GSB o Qualicoat per la zincatura di singoli pezzi per articoli in acciaio
- Fare riferimento anche alla scheda descrittiva VFF ST.01

In presenza di esposizione a corrosione intensa, durata della protezione prolungata (ad esempio serramenti in zona costiera) o sollecitazioni particolari, occorre definire un sistema di protezione contro la corrosione specifico per il singolo caso.

Il produttore del materiale usato per la verniciatura deve provare l'idoneità del suo prodotto per il rivestimento dei profili e la protezione contro la corrosione dell'intero sistema (rivestimento di base e topcoat, zona del cordone di saldatura, bordo tagliato).

7.7 Tratamiento de superficie

7.7.1 Generalidades, la pintura

El tratamiento de la superficie sirve como protección contra la corrosión y para dar color. Por norma general, debe realizarse tras la mecanización de perfiles de acero. Excepción: Perfiles de aluminio.

Debe evitarse la acumulación del revestimiento, sobre todo en las zonas de alojamiento de las juntas y la barra de soporte de cristal.

Se aplican las siguientes normas:

- EN ISO 12944 Protección de estructuras de acero frente a la corrosión mediante sistemas de pintura protectores.
- DIN 55634 - Sustancias de revestimiento y recubrimientos: protección contra corrosión de componentes portantes de paredes finas de acero
- Directiva de GSB o Qualicoat para el revestimiento individual de componentes de acero
- Debe hacerse referencia a la hoja de datos ST.01 de VFF

Si la carga corrosiva es muy elevada y se requiere una protección prolongada (p. ej. Ventanas en zona de costa) y en caso de exigencias especiales, hay que determinar el sistema de protección contra corrosión adecuado en cada caso individual.

El fabricante debe acreditar el carácter adecuado de su producto para el revestimiento de los perfiles (sin tratamiento o galvanizado continuo en caliente) y para la protección contra corrosión del sistema completo (revestimiento básico y de cobertura, zona de cordón de soldadura, borde de corte).

7.7.2 Procedure

In order to achieve perfect adhesion of the coating system, an appropriate surface must be created by cleaning and roughening or chemical pre-treatment.

7.7.2 Procedura

Per ottenere un'adesione perfetta del sistema di rivestimento, anche la superficie di acciaio deve essere adeguatamente pulita, irruvidita o sottoposta ad apposito pretrattamento chimico.

7.7.2 Procedimiento

Debe conseguirse una superficie adecuada mediante la limpieza, el raspado o el tratamiento previo químico para garantizar la adherencia impecable del sistema de revestimiento.

7.7.3 Weld seam area

Weld beads and scale must be carefully removed with the grinding machine and, if necessary, reworked with a blasting gun and corundum sand.

7.7.3 Area del cordone di saldatura

Eliminare accuratamente perle di saldatura e scaglie di laminazione con la smerigliatrice; se necessario perfezionare con una pistola per sabbiatura e sabbia di corindone.

7.7.3 Zona de cordón de soldadura

Las perlas de soldadura y las marcas por óxido deben eliminarse cuidadosamente con la lijadora y, en caso necesario, repasarse después con una pistola a presión y corindón.

7.7.4 Cleaning the surfaces

Due to the forming process and the subsequent machining, the profile surfaces are soiled with cooling lubricant, grease, cutting oil etc. To ensure perfect adhesion of the coating, the profiles must be completely cleaned. The choice of the cleaning process is incumbent on the coating company carrying out the work.

Possible cleaning processes:

- A) Washing off with solvent mixtures
- B) Steam jet cleaning with or without chemical additives
- C) High-pressure hot-water cleaning with or without chemical additives
- D) Alkaline or acidic decoction degreasing in immersion or spraying process.

7.7.4 Pulizia delle superfici

A seguito del processo di profilatura e della successiva lavorazione, le superfici dei profili si sporcano con residui di refrigerante, grasso, olio di taglio, ecc. Per ottenere un'adesione perfetta del rivestimento, è necessario pulire accuratamente i profili. La scelta del metodo di pulizia spetta alla ditta che esegue i trattamenti. Metodi di pulizia possibili:

- A) Risciacquo con miscela di solventi
- B) Pulizia con getto di vapore con o senza additivi chimici
- C) Pulizia con idropulitrice ad alta pressione con o senza additivi chimici
- D) Sgrassaggio in ambiente alcalino o acido per immersione o a spruzzo.

7.7.5 Mechanical roughening of the surface

Mechanical roughening significantly improves the adhesion between the coating and the substrate. In the simplest case, the profiles and frames are ground with abrasive paper or corundum plastic fleece (e.g. Scotch Brite). Disadvantage: very high input for profiled surfaces - no reliable process. In particular with larger quantities, overblowing (= sweep jets) with corundum at reduced pressure and a jet impact angle of < 30° is more economic and safer. Any abrasion and blasting abrasive residue must be removed completely.

Warning: In the case of continuously hot-dip galvanized profiles, the metal coating must not be removed.

7.7.5 Preparazione meccanica della superficie

La preparazione meccanica migliora decisamente l'adesione tra rivestimento e fondo. Nel caso più semplice i profili e i telai vengono smerigliati con carta abrasiva o tela sintetica al corindone (ad es. Scotch Brite). Svantaggi: molto faticoso in caso di superfici profilate - metodo proceduralmente non affidabile. Soprattutto in presenza di grandi quantità di pezzi, una sabbiatura leggera con corindone ad una pressione inferiore e un angolo di impatto entro i 30° è più proficua e sicura. Eliminare completamente il materiale abrasivo e i residui di materiale per sabbiatura.

Avvertenza: in caso di profili zincati per immersione a caldo il rivestimento metallico non può essere rimosso.

7.7.4 Limpieza de las superficies

Debido al proceso de cambio de forma y la mecanización posterior, las superficies del perfil están contaminadas con lubricantes de refrigeración, grasas, aceites de corte, etc. Los perfiles deben limpiarse para garantizar un nivel de adherencia óptimo del revestimiento. La empresa encargada del revestimiento debe elegir el procedimiento de limpieza adecuado. Procedimientos de limpieza admisibles:

- A) Aclarado con mezcla de disolventes
- B) Limpieza con chorro de vapor con o sin adición de sustancias químicas
- C) Limpieza con chorro de agua caliente a presión con o sin adición de sustancias químicas
- D) Desengrasado por cocción alcalina o ácida mediante inmersión o pulverización.

7.7.5 Raspado mecánico de la superficie

El Raspado mecánico mejora notablemente la adherencia entre el revestimiento y la base. En los casos más simples, los perfiles y marcos se tratan con papel de lija o fieltro de corindón y plástico (p. ej. Scotch Brite). Desventaja: Se requiere un gran esfuerzo en las superficies perfiladas; no es un proceso seguro. Sobre todo para cantidades mayores es preferible la técnica del sobresoplado (= chorro Sweep) con corindón a presión reducida y un ángulo de impacto del chorro 30° porque es más segura y rentable. Debe eliminarse cualquier resto de material desprendido la fricción o resto del material del chorro.

Advertencia: En el caso de los perfiles con galvanizado continuo en caliente no se debe eliminar el recubrimiento metálico.

7.7.6 Chemical surface treatment

Chemical surface treatment is an alternative to mechanical roughening. The procedural instructions and safety regulations must be observed. For profiles of the W20 series from OTTOSTUMM | Mog only zinc phosphating is possible.

7.7.6 Trattamento chimico della superficie

Il trattamento chimico della superficie rappresenta un'alternativa al trattamento meccanico. Osservare le linee guida sul metodo e le precauzioni di sicurezza. Per profili della serie W20 di OTTOSTUMM | Mog è possibile solo la fosfatazione allo zinco.

7.7.6 Tratamiento químico de la superficie

El tratamiento químico de la superficie representa una alternativa al raspado mecánico. Deben tenerse en cuenta las normas de seguridad y las instrucciones del procedimiento. Para los perfiles de la serie W20 de OTTOSTUMM | Mog solo es posible el fosfatado de zinc.

7.7.7 Types of coating

W20 profiles can be powder coated or wet painted.

You'll find the different painting techniques in a specific chapter of this documentation (6.3.0).

7.7.7 Tipi di verniciatura

I profili W20 possono essere verniciati a liquido o a polvere.

Trovate le diverse metodologia di verniciatura nell'apposito capitolo di questa documentazione (6.3.0).

7.7.7 Tipos de pintura

Los perfiles W20 se pueden pintar en húmedo y recubrirse con pintura en polvo.

Encontrará las diferentes técnicas de pintura en un capítulo específico de esta documentación (6.3.0).

7.8 Installation on site

7.8.1 Glazing

The glazing systems of all OTTOSTUMM | Mogs series comply with the relevant standards, the cushioning regulations of the glazing trade and the guidelines of insulating glass manufacturers. Particular attention must be paid to the regulations regarding pressure compensation and drainage from free rebate spaces. All glazing systems are usually designed for glazing between elastomer profiles (EPDM or neoprene).

If necessary, a silicone-free lubricant is applied to the seals to facilitate installation.

The glass mass is determined and the glazing beads and sealing profiles are selected on the basis of the filling thickness according to the specifications in the program list and processing documents.

Wet glazing is possible and must be carried out in accordance with the generally applicable regulations.

In the case of acrylic glass (PMMA) and polycarbonate (PC) fillings, the risk of stress cracks in these sheets in contact with our EPDM seals cannot be excluded. The risk of incompatibility is beyond our control and must be clarified by the processor with the manufacturers of such fillings.

7.8 Posa in opera

7.8.1 Vetrazione

I sistemi di vetratura di tutte le serie OTTOSTUMM | Mogs rispettano le norme in materia, le disposizioni valide per la lavorazione artigianale del vetro e le linee guida dei produttori di vetro isolante. Da tenere in particolare considerazione sono le disposizioni relative alla compensazione della pressione e al drenaggio dagli spazi sotto il vetro.

In linea generale tutti i sistemi di vetratura sono predisposti per la sigillatura con garnizioni (EPDM o Neoprene).

Se necessario, le garnizioni sono progettate per essere montate semplicemente con un lubrificante privo di silicone.

Il calcolo delle dimensioni del vetro e la scelta dei profili fermavetro e dei profili di tenuta devono avvenire in base allo spessore della vetrata isolante e secondo le indicazioni contenute nel catalogo e nella documentazione per la lavorazione.

La vetratura sigillata con silicone è ammessa e deve essere realizzata secondo le normative genericamente valide.

In caso di installazione di lastre di acrilico (PMMA) e policarbonato (PC) non è escluso il rischio di crepe da tensione nelle zone dovute al contatto con le nostre garnizioni in EPDM.

Il pericolo di incompatibilità è fuori dal nostro controllo, pertanto il produttore di serramenti è tenuto a chiarire tali eventualità con i produttori di questo tipo di lastre.

7.8 Montaje

7.8.1 Acristalamiento

Los sistemas de acristalamiento de todas las series OTTOSTUMM | Mogs cumplen las normas generales aplicables, los reglamentos de colocación de calzos del gremio cristalero y las directrices de los fabricantes del vidrio aislante. Debe prestar especial atención a las normas relativas a la compensación de presión y el drenaje de agua en las zonas del galce.

Por norma general, todos los sistemas de acristalamiento han sido concebidos para el acristalamiento entre perfiles de elastómero (EPDM o neoprenos).

Si se requiere, las juntas están provistas de un lubricante sin silicona para facilitar su montaje. La determinación de las medidas del vidrio, así como la elección de barras de soporte de cristal y perfiles de sellado en función del grosor de llenado deben realizarse de acuerdo con las indicaciones en la lista de programas o en la documentación de procesamiento.

Se puede realizar un acristalamiento en mojado siempre y cuando se cumplan los reglamentos generales vigentes.

En el caso de rellenos de vidrio acrílico (PMMA) y policarbonato (PC) no se puede descartar el riesgo de fisuras por tensión en esas placas cuando entran en contacto con nuestras juntas de EPDM. El riesgo de esta incompatibilidad está fuera de nuestro control y debe evaluarlo la empresa procesadora junto con los fabricantes de los rellenos citados.

7.8.2 Joint sealing

For the sealing of structural attachment and construction joints, use specific and certified products, referring to the manufacturer's instructions.

7.8.2 Sigillatura giunti

Per l'isolamento delle fughe della costruzione e dei punti di giunzione con il vano murario, utilizzare prodotti specifici e certificati, rifacendosi alle indicazioni del produttore.

7.8.2 Sellado de juntas

Para sellar fugas de conexiones constructivas y fugas generales en la construcción, use productos específicos y certificados, refiriéndose a las indicaciones del fabricante.

7.8.3 Prevention of surface damage during installation

For a correct conservation of OTTOSTUMM | Mogs frames it is advisable to use counter frames, in order to carry out the installation only at the conclusion of the masonry and plastering works.

In case of installation at an early stage of the construction site, with the use of self-adhesive plastic films, the user is solely responsible for ensuring that the products used are fully compatible with the components.

For large objects, we recommend the interim acceptance of construction phases immediately after their completion.

7.8.3 Prevenzione dei danni ai telai durante la posa

Per una corretta conservazione dei telai OTTOSTUMM | Mogs si consiglia di utilizzare sempre dei controtelai, in modo da eseguire la posa in opera solo a conclusione dei lavori di muratura e intonacatura.

In caso di posa in fase iniziale del cantiere, con utilizzo di pellicole di plastica autoadesive rimovibili, l'utilizzatore sarà il solo responsabile della completa compatibilità dei prodotti utilizzati con i componenti da montare.

In caso di grandi dimensioni consigliamo di procedere al collaudo del lotto appena posato.

7.8.3 Prevención de daños superficiales en marcos

Para una correcta conservación de los marcos OTTOSTUMM | Mogs es aconsejable utilizar siempre contramarcos, con el fin de realizar la instalación solo al finalizar los trabajos de albañilería y revoque.

Si se emplean otros procedimientos de protección, con láminas autoadhesivas de plástico, use productos especificados y certificados, en base a las instrucciones del fabricante.

En caso de objetos de grandes dimensiones, recomendamos la recepción intermedia de los tramos constructivos inmediatamente después de su fabricación.

7.8.4 Cleaning

In addition to the exposure to the sun and weather, exterior wall elements are exposed to aggressive air components and are therefore inevitably subject to soiling. This not only impairs the appearance of the components, but also poses an increased risk of corrosion due to the constant effect of the dirt deposits. The components must therefore be cleaned at intervals, which vary depending on the location. In the following we confine ourselves to a few essential notes:

Light soiling is removed with water and a neutral cleaning agent (no soapy water!) using a sponge and cloth. Then rinse thoroughly with demineralized water.

If other cleaning agents are required, a test application on a concealed surface should first ensure that surfaces are neither mechanically nor chemically corroded. Cleaners with pH values below 5 and above 8 as well as abrasive or scouring agents such as steel wool or wire brushes must be excluded in any case. Further details can be found in the technical literature.

7.8.4 Pulizia

I serramenti sono esposti a diverse sollecitazioni quali sole, agenti atmosferici, ma anche particelle aggressive presenti nell'aria ed è quindi inevitabile che si sporchi. Oltre a pregiudicare l'aspetto delle superfici, l'imbrattamento aumenta il rischio di corrosione dovuta al contatto costante con i depositi di sporco. I serramenti devono essere puliti a intervalli regolari a seconda del luogo di installazione.

Ci limitiamo a fornire le seguenti indicazioni fondamentali:

Eliminare lo sporco leggero con acqua e un prodotto per la pulizia neutro (no soluzioni saponate!) applicati con una spugna e un panno. Dopo ciò risciacquare accuratamente con acqua demineralizzata.

In caso si renda necessario l'utilizzo di altri detergenti, eseguire una prova su una superficie nascosta per verificare che non vi siano reazioni meccaniche o chimiche sulle superfici. Evitare assolutamente detergibili con pH inferiore a 5 o superiore a 8, nonché prodotti abrasivi o leviganti, lana o spazzole d'acciaio. Per ulteriori dettagli consultare la letteratura specifica.

7.8.4 Limpieza de componentes

Aparte del sol y las influencias climáticas, los elementos de paredes exteriores están expuestos a componentes agresivos del aire, por lo que la suciedad es inevitable. La suciedad no solo compromete la apariencia estética de los componentes, sino que representa un serio riesgo de corrosión debido a la actuación continua de la contaminación cuando se acumula en zonas concretas. Por ello, los componentes deben limpiarse en intervalos regulares que varían según el lugar de uso.

Desde OTTOSTUMM | Mogs nos limitaremos a transmitir las siguientes recomendaciones: La suciedad ligera debe eliminarse con agua y un producto de limpieza neutro (no se permiten las soluciones de jabón) con ayuda de una esponja o un paño. A continuación se debe realizar un aclarado exhaustivo con agua demineralizada. Si otros agentes limpiadores son requeridos, una prueba en una zona poco visible que las superficies no sufren daños mecánicos ni químicos. Deben descartarse directamente los productos de limpieza con valores de pH inferiores a 5 y superiores a 8, así como cualquier medio con efecto abrasivo o lijador, así como cepillos metálicos o lana de acero.

Puede consultar más detalles en la documentación especializada.

7.8.5 Use and maintenance

The Construction Products Ordinance must always be observed here. Any relevant product standards also apply.

If there are no malfunctions or damage caused by inappropriate handling, maintenance for private use can be limited to easily oiling or greasing accessible sliding fitting parts at large intervals. Maintenance work for large objects and public buildings should be carried out by a specialist, especially since it involves more extensive maintenance measures. By concluding a maintenance contract with the building owner, the processor can ensure that the quality of their work is maintained to the satisfaction of their customers over a long period of use.

In this context, please also observe the maintenance instructions of the fitting manufacturers.

The following maintenance work is to be performed:

- A) Cleaning of elements, in particular moving parts and functional zones.
- B) Inspection of the seals between:
 - Sash and blind frame Replace damaged rebate gaskets.
 - Glass and sash frame
 - Element frame and building structure
 - If necessary, repair or replace the sealants or sealing profiles.
- C) Inspection of the corner and butt joint at the seals. If necessary, repair them with the adhesives and sealants.
- D) Subject the glazing to a visual inspection for cracks, including edge cracks, and replace it if necessary.
- E) Verification of all functions:
 - Check the fitting components for ease of movement and grease the movable parts if necessary. Bolted strips with plastic bearing bushings are maintenance-free and must not be lubricated.

The replacement of non-functional parts (fittings, accessories, glass etc.) is the responsibility of the authorised specialist company.

7.8.5 Uso e manutenzione

A riguardo è necessario attenersi essenzialmente al regolamento sui prodotti per l'edilizia. Si applicano inoltre le rispettive norme di prodotto, ove presenti.

Se non sono presenti malfunzionamenti o danni dovuti ad uso improprio, è possibile limitarsi alla manutenzione prevista in caso di utilizzo privato, che consiste nella lubrificazione con quantità moderate di olio o grasso dei componenti mobili delle ferramenta a cui è possibile accedere ad intervalli relativamente distanziati. I lavori di manutenzione su oggetti di grandi dimensioni o su edifici pubblici devono essere eseguiti da ditte qualificate, in particolare quando l'intervento è associato ad altre misure conservative del fabbricato. In questo caso il produttore di serramenti può stipulare un contratto di garanzia per assicurarsi che la qualità del suo lavoro resti invariata nel tempo, per la massima soddisfazione del cliente. A tal riguardo occorre tenere presenti anche le istruzioni di manutenzione del costruttore delle ferramenta.

I lavori di manutenzione da eseguire sono i seguenti:

- A) Pulizia degli elementi, in particolare delle parti mobili e delle aree rilevanti per il funzionamento.
 - B) Controllo della tenuta tra:
 - Telai del battente e telaio dell'anta; sostituire le garnizioni della battuta danneggiate.
 - Vetro e telaio del battente;
 - Telaio dell'infisso e muratura;
 - Se necessario migliorare la qualità del sigillante o dei profili di tenuta, oppure sostituirli.
 - C) Controllo delle giunzioni d'angolo delle garnizioni; eventualmente, migliorare la qualità con i collanti/sigillanti.
 - D) Controllo della vetratura mediante ispezioni visive in merito a fessurazioni; se necessario sostituire.
 - E) Controllo di tutte le funzionalità:
 - Controllare la mobilità di tutti i componenti della ferramenta, eventualmente ingassare le parti mobili. Le cerniere con boccole in plastica non richiedono manutenzione e non devono essere lubrificati.
- La sostituzione di parti non funzionanti (ferramenta, vetro, accessorio) spetta alla ditta specializzata autorizzata.

7.8.5 Uso y mantenimiento

Por norma general, en este caso debe tenerse en cuenta la normativa de productos constructivos. Adicionalmente deben tenerse en cuenta las normas de producto aplicables, si las hay.

Si no se da un funcionamiento incorrecto y si no hay daños causados por un tratamiento incorrecto, el mantenimiento para uso privado puede limitarse a la lubricación ligera con aceite o grasa de los componentes deslizantes accesibles de los herrajes en intervalos regulares prolongados. Los trabajos de mantenimiento de objetos de mayor tamaño o de obras públicas debe realizarlos un especialista siempre y cuando estén sujetos a más medidas de conservación. En este caso, la empresa procesadora puede celebrar un contrato de mantenimiento con los propietarios de la obra para garantizar que la calidad de su trabajo se conserve durante un período de uso prolongado y cumplir los requisitos de su cliente.

En este contexto debe tener en cuenta también las indicaciones de mantenimiento del fabricante de los herrajes.

Deben llevarse a cabo los siguientes trabajos de mantenimiento:

- A) Limpieza de los elementos, sobre todo piezas y zonas de funcionamiento móviles.
- B) Comprobación de las juntas entre:
 - Marcos de hojas y de molduras, sustituir las juntas de tope dañadas.
 - Cristal y marcos de hojas
 - El marco general del elemento y el cuerpo constructivo
 - Sustituir o corregir los agentes sellantes o los perfiles de junta si es necesario.
- C) Comprobación de las uniones en esquina y tope en las juntas; aplicar los agentes adhesivos y sellantes del capítulo Medios auxiliares si es necesario.
- D) Comprobación del acristalamiento en busca de fisuras zonas estalladas, sustitución en caso necesario.
- E) Comprobación de todas las funciones:
 - comprobar la facilidad de marcha de las piezas de herraje, lubricar las piezas móviles si es necesario. En caso de cintas atornilladas con cojinetes de plástico, estos están libres de mantenimiento y no deben lubricarse.

Solo empresas especializadas deben ocuparse de la sustitución de piezas que no funcionan (herraje, accesorios, cristal, etc.).

7.9 Technical services

Our planning and drawing documents, processing guidelines and fitting installation plans make it easier for you to process our systems. Even without explicit indication, the processing guidelines of the basic series apply to all object-related construction suggestions. Furthermore, the consulting services of our company and our sales partners are at your disposal. Documents and consultations correspond to our best knowledge. However, no guarantee can be given for the absence of errors, unless the errors are based on intent or gross negligence on our part. We offer our processors seminars with intensive instruction in the theory and practice of OTTOSTUMM I Mog systems. We also support other EDP software, such as FPPRO Emmigisoft and LogiKal® from ORGADATA etc. We keep our customers up to date with the latest technical and standardization information.

7.9 Consulenza tecnica

I nostri elaborati di progetto, disegni, direttive di lavorazione e schemi di montaggio delle ferramenta semplificano la lavorazione dei nostri sistemi. Anche senza esplicita indicazione le direttive di lavorazione delle serie di base valgono per tutte le proposte costruttive riferite all'oggetto. I nostri consulenti interni e partner commerciali sono inoltre a vostra completa disposizione. La documentazione e le consulenze riflettono le migliori conoscenze di cui disponiamo. Non possiamo assumerci tuttavia la responsabilità per l'assoluta assenza di errori, salvo il caso in cui l'errore sia dovuto a dolo o grave negligenza da parte nostra. Ai nostri produttori di serramenti offriamo seminari con una ricca offerta di nozioni teoriche e pratiche sui sistemi OTTOSTUMM I Mog. Sosteniamo inoltre software dedicati, come FPPRO Emmigisoft e LogiKal® di ORGADATA, ecc. Teniamo i nostri clienti aggiornati su questioni tecniche e normative fornendo loro continue informazioni.

7.9 Apoyo técnico

Nuestra documentación de planificación y representación gráfica, las directivas de procesamiento y los planos de montaje de herrajes le facilitan el procesamiento de nuestros sistemas. Aunque no se indique expresamente, en todas las propuestas constructivas concretas de un objetos se deben aplicar las directivas de procesamiento de las series básicas. Además, puede acudir a los servicios de asesoramiento de nuestra empresa y nuestros socios de distribución. La documentación y el asesoramiento que facilitamos se basa en nuestros conocimientos y lo ofrecemos de buena fe. No obstante no podemos garantizar la ausencia de errores a excepción de información errónea facilitada con premeditación o por negligencia grave. A nuestras empresas procesadoras le ofrecemos seminarios con formación intensiva teórica y práctica para los sistemas OTTOSTUMM I Mog. Además trabajamos con otros programas de procesamiento electrónico de datos como, por ejemplo, FPPRO y LogiKal® de ORGADATA, etc. Mantenemos a nuestros clientes siempre al día en cuanto a la técnica y las normativas gracias a la información actualizada que manejamos.

7.10 Disclaimer

All the information contained in this documentation is given to the best of our knowledge and ability. However, we decline all responsibility for the use of any suggestions, examples of applications and/or data, or for typographical errors or scale reproductions.
 Details and solutions contained therein must be verified with reference to mechanical, functional and technical feasibility, as well as static compliance, on the basis of the regulations in force, releasing the companies Otto Stumm and Mogs from any liability of any kind. The Manufacturer is responsible for the technical performance characteristics of the product resulting from the manufacturing and assembly of the system, and for its suitability to be placed on the market in accordance with and in compliance with all current law. We reserve the right to make technical changes without prior warning.

All items in this catalogue are subject to availability at the time of order.

No part of this catalogue may be reproduced, published, distributed, reused by any means whatsoever, or copied, without our prior written permission.

7.10 Avvertenze

Tutte le informazioni contenute in questa documentazione sono riportate al meglio delle nostre conoscenze e capacità.
 Tuttavia, decliniamo ogni responsabilità per l'uso dei dati, suggerimenti o esempi di applicazione, come pure per errori tipografici o riproduzioni in scala. Dettagli e soluzioni ivi contenute devono essere verificate con riferimento alle caratteristiche meccaniche e funzionali e alla fattibilità tecnica, nonché alla conformità statica, sulla base della normativa vigente, sollevando le società Otto Stumm e Mogs da qualsiasi responsabilità di qualsiasi tipo.

Il Produttore si assume la responsabilità in relazione alla conformità tecnica del prodotto derivante dalla lavorazione e dall'assemblaggio del sistema e ne garantisce l'idoneità ad essere immesso sul mercato in conformità e nel rispetto della normativa vigente.

Ci riserviamo il diritto di apportare modifiche tecniche in qualsiasi momento, senza preavviso. L'evasione dell'ordine è condizionata dall'effettiva disponibilità dei prodotti al momento dell'ordine stesso. Nessuna parte di questo catalogo può essere copiata, riprodotta, pubblicata, distribuita o riutilizzata con qualsiasi mezzo senza il nostro previo permesso scritto.

La versione attuale è disponibile all'indirizzo
www.ottostumm-mogs.com

7.10 Descargo

Toda la información contenida en esta documentación se presentan según nuestro mejor conocimiento y habilidad.

Sin embargo, rechazamos cada responsabilidad por el uso de los datos, sugerencias o ejemplos de aplicación, así como errores tipográficos o reproducciones a escala.

Los detalles y soluciones que se contienen deben ser objeto de verificación mecánica, funcional y viabilidad técnica.

Además, la conformidad estática se tiene que basar en la normativa vigente, eximiendo a las empresas Otto Stumm y Mogs de cualquier responsabilidad de cualquier tipo. El fabricante se hace responsable de la conformidad técnica del producto resultante de la producción y el ensamblado del sistema y garantiza su idoneidad para la comercialización de acuerdo con los reglamentos aplicables y en cumplimiento de los mismos.

Nos reservamos el derecho de efectuar cambios técnicos en cualquier momento, sin aviso. El cumplimiento del pedido está condicionado a la disponibilidad efectiva de los productos en el momento del mismo.

Ninguna parte de este catálogo puede ser reproducida, publicada, distribuida, reusada por cualquier medio o copiada, sin nuestro permiso previo por escrito.

La versión actualizada está disponible en
